

DEKALB COUNTY COMMUNITY ANALYSIS: 2012

September 2012

DeKalb County Health Department
2550 North Annie Glidden Road
DeKalb, IL 60115

TABLE OF CONTENTS

	<u>Page</u>
Chapter 1: INTRODUCTION AND SUMMARY OF FINDINGS	
Introduction	1
Summary of Findings	1
Chapter 2: Population	1
Chapter 3: Race, Ethnicity, Language, Ancestry	2
Chapter 4: Age and Gender	3
Chapter 5: Household Characteristics, Marital Status, and Marriage/Divorce	4
Chapter 6: Housing	5
Chapter 7: Education and Employment	6
Chapter 8: Income and Poverty	8
Chapter 9: Births	9
Chapter 10: Deaths	11
Chapter 11: Health Status and Behaviors	12
Chapter 12: Health Resources and Utilization	14
Chapter 13: Crime and Violence	16
Chapter 2: POPULATION	
Population	18
Migration and Components of Change	20
IRS County Migration Data	21
Chapter 3: RACE, ETHNICITY, LANGUAGE, ANCESTRY	
Race	25
Hispanic Ethnicity	25
Race/Ethnicity	28
Impact of Northern Illinois University	30
Age Differences in Racial Composition	30
Race/Ethnicity of Public School Students	33
Ancestry	34
Foreign Born and Citizenship	34
Languages	36
Religion	37
Chapter 4: AGE AND GENDER	
Age	40
Median Age by Gender and Race/Ethnicity	43
Gender Ratio	43
Age and Gender for DeKalb and Sycamore	43
Chapter 5: HOUSEHOLD CHARACTERISTICS, MARITAL STATUS AND MARRIAGE/DIVORCE	
Household Relationships	47
Household Structure	47
Household Setting for Children	49
Household Settings for the Elderly	50
Household Characteristics for DeKalb and Sycamore	51
Unmarried Partner Households	52
Persons in Group Quarters	52
Marital Status	53
Marriage and Divorce	54

TABLE OF CONTENTS (cont'd.)

	<u>Page</u>
Chapter 6: HOUSING	
Housing Units and Occupancy	58
Tenure	58
Units in Structure	60
Rooms and Occupants	61
Year Moved Into Current Residence	62
Age of Housing	62
Home Sales and Value and Gross Rent	63
Housing Costs Related to Income	66
Availability of Phones and Vehicles	67
Housing in City of DeKalb and Sycamore	68
Chapter 7: EDUCATION AND EMPLOYMENT	
Educational Attainment	70
High School Graduation Rates	72
Employment Participation	73
Occupation and Industry	73
Unemployment	75
Top Employers	78
Commuting	80
Education and Employment Characteristics for Cities of DeKalb and Sycamore	82
Chapter 8: INCOME AND POVERTY	
Median Income	85
Detailed Household, Family, and Nonfamily Income	86
Per Capita Personal Income	87
Poverty	88
Income and Poverty Characteristics of DeKalb and Sycamore	90
Medicaid Enrollment	91
Chapter 9: BIRTHS (NATALITY)	
Births, Birth and Fertility Rates	94
Births by Race/Ethnicity	96
Age of Mother	97
Teen Births	100
Births to Unmarried Mothers	102
Low Birth Weight	103
Prenatal Care	104
Tobacco and Alcohol Use During Pregnancy	106
Birth Characteristics by Race/Ethnicity	107
Birth Defects	108
Delivery Method	108
Medicaid Births	109
Induced Pregnancy Terminations (Abortions)	110
Infant Deaths	111
Births in Cities of DeKalb and Sycamore	112

	<u>Page</u>
Chapter 10: DEATHS (MORTALITY)	
Deaths and Death Rates	117
Race/Ethnic Deaths	117
Deaths by Age Group	119
Deaths by Cause	119
Cause of Death by Gender	121
Leading Death Causes by Age Group	121
Death Cause Trends	124
Life Expectancy	124
Premature Mortality	126
Premature Mortality - County Health Rankings	127
DeKalb and Sycamore Deaths	127
Chapter 11: HEALTH STATUS AND BEHAVIORS	
Perception of Health	129
Prevalence of Chronic Conditions	130
Health Behaviors	132
Cancer Screening Use	132
Cancer Incidence	133
Communicable Diseases (non-STD)	135
Sexually Transmitted Diseases	135
AIDS and HIV	139
Childhood Blood Lead Levels	140
Childhood Immunization	141
Special Education Enrollment	141
Mental Disorders	142
Estimated Illicit Drug Use and Substance Abuse Treatment Need	143
Alcohol Involvement in Fatal Accidents	143
DUI Arrests	146
Chapter 12: HEALTH RESOURCES AND UTILIZATION	
Health Insurance and Health Care Use	148
Hospitalization	151
Hospital Use by Admission Reason	152
Hospitalization by Gender and Age	156
Preventable Hospitalizations	163
Emergency Department Visits	164
Health Facilities	168
Manpower	173
Chapter 13: CRIME AND VIOLENCE	
Introduction	178
Crime Rate	178
Community Crime Rates	178
City of DeKalb Arrests by Age and Gender	181
Drug Arrests	181

13.2	DeKalb County and Illinois Reported and Indicated Child Abuse Rate: 1990-2010	189

Chapter 1 INTRODUCTION AND SUMMARY OF FINDINGS

Introduction

The DeKalb County Community Analysis presents a comprehensive overview of DeKalb County, describing county residents through secondary sources of information which characterize the population. Topics include population size, age, race/ethnicity, gender, family structure, income and poverty, education, employment, housing, births, deaths, health status including morbidity, health behaviors, disability, health resources, health care utilization, social indicators, and crime and violence.

The major sources of information for the Community Analysis are the *2010 Census of Population and Housing, 2008-2010 American Community Survey*, other U.S. Census updates, vital statistics collected by the Illinois Department of Public Health, Behavioral Risk Factor Survey, and social and economic indicators primarily from state and regional agencies.

The DeKalb County Community Analysis relies quite heavily upon recent data from the American Community Survey (ACS). Historically, the Census Bureau has collected detailed demographic, housing, social and economic data every ten years, selecting a sample of one in six households to complete the “long form.” Desiring more timely information, the Census Bureau has replaced the decennial “long form” used in 2000 with the ACS, which collects the same type of data every year. Three million households across the nation are surveyed annually, using a multi-stage sampling technique and a varying percentage of households depending on an area’s size. Because the sample is limited, years are combined for greater reliability. This report primarily relies on 2008-2010 data so as to reflect the impact of the recession.

This report provides the primary source for development of the fourth IPLAN for the DeKalb County Health Department. IPLAN is required by the Illinois Department of Public Health to be completed every five years. From the data provided, community representatives choose priorities for action and develop implementation strategies. In addition, Kishwaukee Hospital will use the information as input for their first Community Health Needs Assessment as required for not-for-profit hospitals by the Affordable Care Act.

Health Systems Research of the University of Illinois College of Medicine at Rockford, which specializes in community needs assessments for health and human services organizations, prepared earlier reports for the DeKalb County Health Department. This edition was prepared by Joel Cowen, MA and Karen Lytwyn, MPH, retirees from Health Systems Research.

Summary of Findings

A summary of key findings for each chapter of the *DeKalb County Community Analysis* is presented below.

Chapter 2: Population

- In 2010, the population of DeKalb County stood at 105,160, up 18.2% from 88,969 in 2000. The county is presently the state’s twentieth largest county and was the fifth fastest growing Illinois county from 2000-2010.
- DeKalb County has grown in all decades since 1900 except for 1910-1920. The greatest growth took place following the broadening of Northern Illinois University by the state in 1955, with peak gains in the 1960s when the county added nearly 20,000 persons and grew by 38.6%.
- The Census Bureau estimates the July 1, 2011 DeKalb County population at 104,743, yielding an estimated loss of 417 persons since April 1, 2010.

- Among the twelve DeKalb County incorporated communities, all except Shabbona (-0.4%) experienced 2000-2010 growth. Cortland more than doubled (+106.7%) in the decade to lead DeKalb County places, followed by Kirkland (+49.6%), Somonauk (+46.2%) and Sycamore (+45.7%).
- DeKalb (43,862) is the county's largest community, with Sycamore (17,519) next in size. These two adjacent cities contain 58.4% of the county's entire population.
- When viewed by township, DeKalb Township (46,781), Sycamore Township (14,425) and Cortland Township (10,968) account for two-thirds (68.6%) of county residents. Fastest growing from 2000-2010 among townships were Cortland (+57%), Sycamore (+38.7%), Genoa (+36.6%), and Afton (+34.5%). Five townships lost population in the past decade including Victor (-17.9%), Milan (-9.1%), South Grove (-4.3%), Pierce (-4%), and Shabbona (-0.1%).
- Of the 18,358 estimated 2000-2009 growth, about two-thirds (68.4%) was due to net in-migration. Of the estimated 12,562 net in-migration, 10,123 came from within the United States and 2,439 originated in other nations. Estimated growth for the prior 1990-1999 decade was only 9,061 or half of the 2000-2009 period. Growth from international net migration was greater than domestic migration in the recent decade.
- IRS migration summaries for the past decade show that DeKalb County has changed from being an in-migration area, the case in the past decade until 2007, to a net loss from 2007-2010. In the most recent years for which IRS data are available, 2009 to 2010, 4,362 persons entered the county while 5,086 left. Kane and Cook Counties are the major sources of both in- and out-migrants.

Chapter 3: Race, Ethnicity, Language, Ancestry

- According to the 2010 Census, the racial composition of DeKalb County was 85.1% white, 6.4% black and 2.3% Asian. Other categories total four percent while two percent name more than one race. Hispanic is considered an ethnic group rather than a race. About half of Hispanics choose white and nearly half choose "other" for their racial designation.
- All racial groups experienced growth from 2000-2010 led by "other", +71%, a reflection of Hispanic growth, black (+64.8%), and "multiple races" (50%). The Asian population rose 13.7% over the decade and the white population grew by 13.7%. Among racial groups, the black population has risen appreciably in terms of percentage from 2.2% in 1980 to 6.4% in 2010.
- Hispanic is considered an ethnic identity, not a race, by the Census Bureau. The 2010 DeKalb County Hispanic count stood at 10,647 or one of every ten residents. Expansion of the Hispanic population has been rapid. The 2000 Census found 5,830 Hispanic individuals so that the 2000-2010 increase stood at 82.6%.
- Mexican is the ancestry for most DeKalb County Hispanics, 83.5% in 2010. Puerto Rican (6%) is the second largest group.
- Eight of ten (79.7%) residents are white non-Hispanic. Next in size are Hispanics (10.1%) and blacks (6.3%), followed by Asians (2.3%). When compared to the state and nation, all minority groups are present at lower levels in DeKalb County.
- For the communities of DeKalb and Sycamore, 2010 minority presence is slightly higher than for the remainder of the county. DeKalb is 12.5% Hispanic and 12.5% black, while Sycamore is 7% Hispanic, but only 2.8% black. NIU students may constitute a significant proportion of DeKalb County's black and Asian population depending on whether their residence is local.

- Minority presence is much higher in youth than older populations. For instance, 10.9% of children under age 5 are black non-Hispanic compared to 6.3% for the entire DeKalb County populace. Also, only 1.5% of blacks are aged 65+. With the Hispanic group, 11.9% are children aged 0-4 compared to just 2% of Hispanics who are senior citizens aged 65+.
- Among county public schools, District #428, the DeKalb schools, is the most diverse with only 59% white non-Hispanic, as well as 21.2% Hispanic and 13.3% black. Sizeable Hispanic student presence also appears in Genoa-Kingston #424 (13.3%) and Hinckley-Big Rock #429 (10.6%). For the DeKalb schools the white non-Hispanic percent fell by more than 10%, from 69.6% in 2005-2006 to 59% in 2010-2011.
- The two leading ancestries locally are German (32.4% designating) and Irish (17.4%). Other ancestries named by 5% or more of respondents were English (8.6%), Polish (7%), Italian (6.4%) and Swedish (6.3%). As compared to the nation, the area has nearly twice the percent, 32.4%, of German ancestry than the nation (16.4%). Irish ancestry, at 17.4%, also exceeds the nation (11.8%) substantially. Present at levels well above the U.S. are Swedish (6.3% vs. 1.4%), Norwegian (4.7% vs. 1.5%) and Polish (7% vs. 3.2%)
- The vast majority of DeKalb County residents (93.4%) was born in the United States. According to the 2008-2010 American Community Survey, 6.6% are foreign born, much lower than either the state (13.8%) or nation (12.8%), as shown in Table 3.14. One-third of the foreign born have become citizens, a level somewhat lower than found for the state and U.S. Of the 25,313 students enrolled at NIU in 2010, 603 (2.4%) were categorized as non-resident aliens.
- Mexico is the leading place of birth for local foreign-born residents, the birthplace for half of all foreign-born persons. Following are India (10.4%), China (5.3%), Philippines (2.7%), and Poland (2.5%).
- Among foreign-born individuals in the county, one-third (34.3%) have entered the United States since 2000 and more than 70% have entered since 1990. The median year of entry was 1994.
- Of the 98,363 DeKalb County residents five and older, 88.7% speak only English at home, while 11.3%, representing 11,090 persons, speak some other language at home. The leading non-English language spoken at home is Spanish, spoken by 6,533 DeKalb County residents or 6.6%. Other language groupings spoken are Indo-European (2.7%) and Asian/Pacific Islander (1.6%).
- About half (46.5%) of Spanish speakers speak English well and half speak English less than very well (53.5%). Children (64%) are more likely to speak English well than seniors (32.9%).

Chapter 4: Age and Gender

- The age structure of DeKalb County is dominated by the large number of students at NIU so that the 18-24 year-old cohort gives the county about double the proportion than present for the nation - 20.7% of residents are 18-24 compared to 9.9% for the nation. As a result of the college student presence, the DeKalb County median age in 2010 was 29.3 years compared to 37.2 for the U.S. Otherwise, the age structure would be fairly typical, especially if the college students were excluded. Somewhat of a lower older group is present, 9.8% compared to 13.1% nationally for those aged 65+, but “baby boomers” 55-64 represent 9.8% of the population versus 11.8% for the U.S.
- From 1990-2000 the fastest growing age group was persons 45-54 which grew 47.7%. In the 2000-2010 decade, the largest growth was in the 55-64 age group, 66.1%. This expansion of the “boomers” indicates that DeKalb County will soon experience a larger senior citizen proportion.

- The current median age of NIU students stands at 25.6 years, 21.3 for the larger undergraduate group and 31.5 for the graduate/professional students. Older students are becoming more common at NIU.
- In 2010, the median age for women was 30.3 years, 1.8 years older than males, owing primarily to gender differences in longevity. The minority population is substantially younger than the white non-Hispanic group. The black median age in 2010 was 20.5, with Hispanics at 22.5, compared to 33.4 for the white non-Hispanic group.
- Overall, DeKalb County contains 52,530 males and 52,630 females for a gender ratio of 99.8 males per 100 females. Males are the majority in most younger age groups. However, in senior cohorts, the gender ratios become increasingly lower with a ratio of 46.9 at 85 and older, or two women for every man.
- In 2010, as expected, the City of DeKalb (23.6) has a much younger median age than Sycamore (34.9). DeKalb has a larger proportion of males (101.2 gender ratio) than Sycamore (95.2). Sycamore contains higher proportions of both children aged 0-17 and seniors aged 65+.

Chapter 5: Household Characteristics, Marital Status, and Marriage/Divorce

- In 2010, more than nine in ten (93.7%) DeKalb County residents lived in a household. In DeKalb County, 39.1% of persons living in a household in 2010 were the householder, similar to state and national levels, while about one in five was a spouse. Over one-fourth (28.4%) of those in a household was a child, slightly lower than Illinois (30.7%) and the U.S. (29.5%). Nonrelatives accounted for one in ten household members, while “other relative” stood at 4.1%. The DeKalb County nonrelative proportion is well above that of the U.S.
- The number of DeKalb County households stood at 38,484 in the 2010 Census, up from 34,583 in 2000. 61.8% of households are family households, lower than the 65.8% for Illinois and 66.4% for the nation, most likely because of NIU students living in group quarters. The proportion of households which are the “traditional” married couple with children is rather low in today’s society. Only one in five (20.8%) DeKalb County households are “traditional” married couples with children, similar to state (21.0%) and U.S. (20.2%) levels, but down a bit from 22.3% in 2000.
- In 2010, the county contained 3,416 (8.8%) single parent households, up from 8.4% in the 2000 Census. Of the single parent households, three-fourths (74.8%) are headed by a female. The proportion of single father households rose from 1.4% in 2000 to 2.2% in 2010, while single mother households showed a slight decline, dropping from 7% to 6.6%.
- The average household size was 2.56 persons in the last Census, just slightly lower than both state (2.59) and U.S. (2.58) averages. The average family has just 3.11 persons, somewhat smaller than Illinois (3.20) and U.S. (3.14) families. Since 1970, the average size of a DeKalb County household declined steadily from 1970 through 1990, falling from 3.08 in 1970 to 2.64 in 1980, then dropping again to 2.56 in 1990. Since 1990, average household size has remained constant, about 2.56 persons. The average DeKalb County family size has followed a similar pattern, falling from 3.19 persons in 1980 to 3.10 in 1990, and standing at 3.11 for both 2000 and 2010.
- Hispanic households (3.61) have a much higher average household size than either white non-Hispanic (2.48) or black non-Hispanic (2.40) households. The same is true for average family size in that the average Hispanic family contains 4.00 persons, compared to 3.03 for both white non-Hispanic and black non-Hispanic families.

- Over two-thirds (67.3%) of DeKalb County children under age 18 lived in a married couple family in 2010, higher than state (63.2%) and national (61.3%) proportions. Living with a single female parent are 18.6% of DeKalb County children, while six percent reside with a single male parent.
- In DeKalb County, 1,052 children or 4.5%, were living in a home where a grandparent is the householder, somewhat below state (7.6%) and U.S. (7.9%) proportions. Hispanic children are most likely to live with a grandparent, standing at 6.3%, although well below Illinois and U.S. levels. Just 3.2% of black (Hispanic or not) children live with a grandparent, far fewer than for the state (16.1%) and nation (13.2%). The proportion of white children living with a grandparent stands at 4.1% for the county.
- The vast majority (94.8%) of persons aged 65 and older in DeKalb County lived in a household, primarily as a householder or spouse. Almost three in ten (28.3%) of the county's elderly lived alone, primarily women. The number of elderly women living alone stood at 2,125 in the 2010 Census, representing one in five elderly. One in nineteen (5.2%) DeKalb County elderly resides in group quarters, such as senior housing or nursing homes.
- Households in both cities are smaller than the county overall (2.56). Average family size in both cities is also a bit below the DeKalb County average (3.11). DeKalb is home to a smaller proportion of married-couple with children families (15%) compared to the county (20.8%) and Sycamore (22.9%). Single mother households are slightly more common in the two cities than for the county overall (6.6%).
- DeKalb County contained 2,772 unmarried partner households according to the 2010 Census. Of these, 92.8% are male/female households, with just 2.4% containing persons who are both male, and 4.8% in which the individuals are both female. The county has a lower proportion of same sex partners than found in the state or nation, especially for male/male households.
- The number of DeKalb County residents living in group quarters in 2010 was 6,673, comprising 6.3% of the population. Those living in a college dormitory (5,844) accounted for 87.6% of these persons, while individuals in nursing homes comprised 8.5% of the group quarters population. Dorm residents are 5.6% of the county population. Few individuals locally reside in other types of group quarters.
- Among DeKalb County residents, four in ten (40.2%) are single (never married), 46.3% are married, nine percent divorced or separated, and 4.4% widowed. The county contains elevated levels of never married individuals compared to the state and nation, most likely due to the presence of NIU students. A higher proportion of males than females are never married, while many more DeKalb County women (6.9%) than men (2%) are widowed, due to longer female longevity.
- In 2009, DeKalb County residents recorded 546 marriages and 302 divorces for a dissolution ratio of 55.3 divorces for every 100 marriages, the highest ratio since 1998 and somewhat higher than the 2009 Illinois ratio of 44.6. DeKalb County recorded its highest dissolution ratio in 1998 at 66.5, with a low of 39.2 in 1983.

Chapter 6: Housing

- DeKalb County contained 41,079 housing units in 2010. Of these 41,079 units, 6.3% or 2,595, were vacant on April 1, 2010 with vacancies far more common in rental units (7.1%) than owner-occupied units (2.3%). Although the vacancy rate of 6.3% is less than the state (9.9%) and nation (11.4%), vacancies were up appreciably from 4% in 2000. Proportionally, rental vacancies grew the most, from 3.8% in 2000 to 7.1% in 2010.
- Home ownership stood at 61.2% of units in 2010, the highest level in recent decades. Home ownership was 59.5% in 2000. Illinois (67.5%) and the nation (65.1%) exhibit higher levels of home ownership.

Renter-occupied units comprised 38.8% of the occupied housing in 2010, down slightly from 40.5% in 2000. With a major university present, the rental proportion is relatively high.

- The level of white non-Hispanic (66.5%) households who own their home is higher than Hispanic (45.4%) or Asian (32.6%), while black home ownership (12.7%) is considerably lower. Home ownership in 2010 peaked at 83.4% in the 65-74 age group, then fell somewhat among seniors aged 75+. During the past decade, home ownership rose in the 25-34 and 65+ age groups, but declined for all others.
- The area's housing stock in terms of structure was dominated in 2008-2010 by one-unit detached (single family) homes, comprising six in ten (59.2%) of the residential buildings. Another 9.8% are attached single units, such as townhouses. The next most common housing type is structures with 10 or more units, comprising 14.3% of structures.
- The median year that the DeKalb County householder moved into their housing unit was 2004, more recent than the nation at 2002. Owners recorded a median year of 2001 with renters later than 2005. Fewer than one-third (31.6%) of householders lived in DeKalb County before 2000.
- The median year in which DeKalb County housing units were built was 1975, the same year as median housing age for the nation. For Illinois, housing is older with a median year built of 1965. Approximately one in five housing units (20.1%) has been built since 2000. At the other end of the age spectrum, almost as many (18%) were constructed before 1940.
- Recent years have seen a rapid decline in home sales along with lower prices. Single family houses sold fell from a recent peak of 1,820 in 2006 to a low of 537 in 2010. The average price of DeKalb County homes sold declined by one-third (33.5%), from \$215,966 in 2006 to \$143,561 in 2011. Condominium sales in DeKalb County also experienced similar drops. Sales fell from 368 in 2007 to 127 just two years later. Average condominium price was \$159,431 in 2006, but only \$105,411 in 2011.
- Renters are somewhat more likely to pay more of their income for housing than owners. Paying 35% or more of their income in 2008-2010 was half (50.8%) of renters compared to 28.5% of owners. While the median percent of income paid for housing is 35% for renters, the like figure for owners is 26.7%. Housing costs are slightly higher relative to income locally than the state or nation.
- In 2008-2010, overall, 1.6% of DeKalb County households did not have access to a phone (including cell) and 5.9% did not have an available vehicle. Among householders aged 65 and older, one in eight (12.7%) did not have an available vehicle.
- Sycamore (67.6%) has a higher proportion of owner-occupied housing units than the City of DeKalb (41.2%) relative to all available units. The median home values are relatively alike at just over \$180,000, though the median gross rent of \$853 in Sycamore exceeds DeKalb's median of \$732.

Chapter 7: Education and Employment

- More than nine in ten (91.1%) DeKalb County adults aged 25 years and older are high school graduates, exceeding both Illinois (86.5%) and the U.S. (85.3%). Bachelor's degrees have been obtained by 27.5% of residents aged 25+, while graduate degrees stand at 10.2%. Despite the high level of high school graduates and the presence of Northern Illinois University, the proportion with Bachelor's and graduate degrees are below the state and nation.
- Perhaps because a large proportion of the black population is associated with NIU, blacks lead attainment with 95.4% high school graduates and 39.8% college graduates, both higher than the white non-Hispanic group. Only 68.8% of Hispanics aged 25+ have a high school diploma and just 7.9% have completed a Bachelor's degree.

- For the school year 2010-2011, only three of eight DeKalb County school districts exceeded the state graduation rate of 87.8%: Hinckley-Big Rock (96.7%), Somonauk (94.3%), and Genoa-Kingston (88.2%). Lowest was Sandwich, standing at 79.4%.
- Of DeKalb County residents aged 16+, men (75%) were more likely than women (65.2%) to be in the labor force, according to the 2008-2010 American Community Survey. The overall county participation rate of 70.1% is higher than Illinois (66.9%) and the U.S. (65.1%). Women in the workforce, especially those with preschool children, escalated from 53.4% in 1980 to 63.6% in 2000. Of children aged 0-5 in DeKalb County, 64.8% had all parents working. For children aged 6-17, all parents were working for 78.3%.
- Two occupational categories led the 2008-2010 DeKalb County workforce. These were management, professional and related occupations (32.6%) and sales and office occupations (26.4%). Occupational patterns are similar to the nation.
- Educational, health and social services, which employ more than one in four workers (25.9%) constitutes the leading industry sector, slightly above the U.S. level of 22.6%. The next largest local industries are retail trade (13.9%), manufacturing (11.1%), and arts, recreation, accommodations, food (11.1%). Since 2000, manufacturing fell from 16.2% to 12.6%.
- Unemployment in DeKalb County has typically run under national rates. The recent rate bottomed in 2007 at 3.9%, typical of the late 1990s. However, the rate rose to 9.8% in both 2009 and 2010 with nearly 6,000 persons locally lacking jobs. For 2011, some improvement took place as the rate fell to 9.2%.
- Male 2011 unemployment stood at 8.7% compared to 9.7% for females. The black populace displays the highest rate of unemployment - 31.6%, even higher for black females (36.5%). The Hispanic unemployment rate stood at 12.5%, similar for both genders. Though blacks constitute only 5% of the labor force, they are 17.2% of the unemployed.
- The leading employer, by far, in DeKalb County is Northern Illinois University with 4,648 employees, according to the DeKalb County Economic Development Corporation. Other educational entities among the top employers include the DeKalb School District (#3 with 871 employees), Sycamore School District (#6 with 515 employees) and Kishwaukee College (#7 with 500 employees). KishHealth System is the second largest employer with 1,443 persons employed. Also serving the local area is DeKalb County Government, standing at #4 with 696 employees. Distribution centers constitute the largest local private sector, including 3M (#5 with 596 employees) and Target, which stands at #8 (494 employees). Retailers Wal-Mart Super Center (#9 with 475 employees) and HyVee grocery stores (#10, 360 employees) round out the top ten.
- Over time, average commuting time for workers has extended from 15.7 minutes in 1980 to 26.1 minutes for 2008-2010. While the commuting time was well below the U.S. from 1980-2000, DeKalb County now exhibits a slightly longer commute than the nation.
- From 1990 through 2010 a major change took place in that more residents commute elsewhere and more workers living outside of the county work in DeKalb County.
- For DeKalb County residents in 2010, less than half (42.2%) worked within the county, down from 73.6% in 1990. Kane (17.4%), Cook (10%), and DuPage (7.8%) Counties are the major destinations for DeKalb County residents. External worker sources included the following counties: Kane (6.6%), Cook (6.2%) and Ogle (4%). Just over half (52.8%) of DeKalb County workers live in the county.

Chapter 8: Income and Poverty

- The 2008-2010 DeKalb County median household income (\$51,241) was very similar to the median for both the U.S. (\$51,222) and Illinois (\$52,972). From the 2000 Census to 2008-2010, DeKalb County's median household income rose from \$45,828, a 11.8% increase, but lower than the state (13.7%) and U.S. (22%) increases.
- County households headed by 45-54 year olds earned the most in 2008-2010, \$67,467. The county's youngest and oldest households reported the lowest median incomes. Households headed by persons aged 15-24 earned a median income of just \$17,647, while the median for those aged 65 and older stood at \$36,186.
- Among ethnic groups, the 2008-2010 median household income for white, non-Hispanics stood at \$54,325, which was 68.1% higher than the median for Hispanic households (\$32,322) and more than double the black median (\$22,061). Hispanic income fell during the period from \$35,018. Median household income for black households (whether Hispanic or not) increased by 31% during the decade.
- DeKalb County families earn a median income (\$68,735), far higher than nonfamily households (\$27,491) which include a number of college students and elderly householders. The county's 2008-2010 per capita income was \$23,222, somewhat lower than state and national levels.
- The largest proportion of both households (19.9%) and families (23.9%) earn in the \$50,000-\$74,999 range. One-fourth of area households and 12.3% of families earned less than \$25,000 in 2008-2010. At the other end of the income range, 18.2% of households earned more than \$100,000, compared to 27.6% of families.
- In 2010, DeKalb County's per capita personal income (PCPI) of \$30,725 ranked 87th of the 102 Illinois counties. DeKalb County's PCPI was 26.9% lower than the state (\$42,040) and 23% lower than the U.S. level of \$39,937. However, although low, the 2010 PCPI reflected a 7.5% rise from 2009 and is the highest per capita in recent years for DeKalb County.
- More DeKalb County residents live in poverty (16.3%) as a proportion of the population than the state (13.8%) and nation (14.4%), according to the 2008-2010 American Community Survey. During the past decade, DeKalb County poverty increased, following state and national trends. DeKalb County's level rose from 11.4% in the 2000 Census, after dropping during the 1990s.
- Fewer local children aged 0-17 (14.8%) fall below the poverty level than the population as a whole, a pattern which is opposite Illinois and the nation. The county's poverty rate for children is well below both the state (19.4%) and U.S. (20.1%). However, since the 2000 Census (7.1%), the poverty rate for local children has doubled.
- DeKalb County Hispanics (29.3%) recorded a 2008-2010 poverty rate two and a half times higher than the level for white non-Hispanics (11.7%). For both Illinois and the U.S., the Hispanic rate is about double that of white non-Hispanics. Black poverty (whether Hispanic or not)- 39.2% - is even higher than the Hispanic level and more than triple the white non-Hispanic rate.
- Among household groups, female-headed families are most likely to be poor, particularly female-headed families with young children. Almost three in ten (29.6%) female-headed families lives in poverty, reaching 86% of female-headed families with children aged 0-4. The lowest levels of poverty are experienced by senior citizens (4.7%) and families (8.5%).
- Almost one-third (32.3%) of DeKalb County residents live between poverty and 200% of poverty or twice the poverty level. The 2009 poverty threshold was \$21,756 for a family of four with two children and \$10,956 for a person living alone.

- The City of DeKalb's 2008-2010 median household income (\$36,829) was much lower than DeKalb County as a whole (\$51,241), most likely because of the large number of NIU students. The City of DeKalb's median family income stood at \$63,467, a bit lower than the \$68,735 for the county. The city's per capita income (\$18,488) was also less than the overall county per capita of \$23,222. Sycamore recorded both a fairly high median household income (\$66,359) and median family income (\$79,274). Sycamore's per capita income was also higher than the overall county per capita.
- In June 2011, the number of persons receiving Medicaid in DeKalb County stood at 15,735, a 243% increase from ten years earlier, and representing 14.5% of the county's population. Historically, since 1995, the number and proportion of Medicaid recipients generally has risen consistently, with 2011 being the highest level in recent years.

Chapter 9: Births

- DeKalb County reported 1,322 births in 2009, the largest number since 2006 and the second highest number of births since 1980. Since 1980, the number of births in DeKalb County has ranged from a low of 864 in 1984 to a high of 1,334 in 2006. The 1,322 births in 2009 represent a 3.7% increase from 2008, as well as a 18.2% rise since 2000, an increase similar to the population growth.
- DeKalb County birth rates (births per 1,000 population) have consistently fallen below state and national birth rates, largely the result of the presence of a significant college-aged population who tend to be non-child bearing. The 2009 DeKalb County birth rate of 12.3 births per 1,000 population was lower than both the state (14.1) and U.S. (13.5).
- Although relatively low, the DeKalb County fertility rate, a more specific measure of birth activity, has risen somewhat from 1990 to 2009. DeKalb County fertility in 2009 stood at 51.3 births per 1,000 females ages 15-44 compared to 46.6 for 1990.
- In 2009, 88.7% of DeKalb County births were white, while blacks constituted 8.7% of births, much more diverse than in 1980, when white births comprised 95.8% of all DeKalb County newborns and blacks made up just 3% of births. Another natality change has been the growing proportion of births classified as Hispanic, an ethnic identity separate from race. 1995 saw almost a tripling of the proportion of Hispanic births, standing at 9.3% of all births. Since 1995, both the number and proportion of Hispanic births have continued to increase, reaching 225, or one in six, births (17%) in 2009.
- 2009 birth rates by race/ethnicity were white non-Hispanic (11.4), black non-Hispanic (16.7), other non-Hispanic (8.3) and Hispanic (21.1).
- In 2009, almost one-third (32.3%) of DeKalb County births were to women ages 25-29 years, while one-quarter (24.7%) were born to women ages 30-34 and another quarter (24.5%) to ages 20-24. DeKalb County's median age of mother at 27.9 years (2009) is similar to the Illinois (28.5) and U.S. (27.9) figures.
- DeKalb County showed higher 2009 fertility than national rates for women aged 30-34 (103.4 vs. 97.7). Fertility rates among all other age groups were lower than U.S. levels. Fertility for women 15-19 and 20-24 was less than half the U.S. level, likely reflecting the large number of female college students.
- DeKalb County recorded 92 teen births in 2009, 7% of all births, and rising from 6.2% in 2008, which was the lowest proportion in 25 years. Historically, the county's teen birth proportion has generally fallen three or more percentage points below both the state and nation, another reflection of low fertility in the college population. The U.S. level in 2009 was 10%, with Illinois at 9.6%. Most DeKalb County teen births are to mothers in the 18-19 age group, nearly three-fourths (73.9%) in 2009. Teen births

proportions in 2009 for race/ethnic groups were white non-Hispanic (5.8%), black non-Hispanic (8.2%), other non-Hispanic (5.9%) and Hispanic (11.6%).

- In 2009, over one-third (36.7%) of DeKalb County births were to unmarried mothers, a record high for the county and more than three times the 1980 proportion (9.7%). The county's proportion of births to unmarried women has consistently fallen below the state and national levels, though the local rate of increase has been greater so the gap with the state and nation is narrowing. By race/ethnicity, the unmarried proportions in 2009 were white non-Hispanic (20%), black non-Hispanic (76.4%), other non-Hispanic (26.5%) and Hispanic (56.9%).
- In 2009, 84 DeKalb County births were of low weight (less than 2,500 grams or five and half pounds) accounting for 6.4% of all births, falling from 7% in 2008. This proportion was somewhat lower than Illinois at 8.4% and the U.S. at 8.2%. Low birth weight percentages by race/ethnicity for 2009 were white non-Hispanic (7%), black non-Hispanic (4.5%), other non-Hispanic (14.7%) and Hispanic (3.1%).
- In 2008, the most recent year available, almost nine in ten (86.1%) DeKalb County births received first trimester prenatal care, the highest level since 1980. In 2009, 76.6% of DeKalb County births received adequate care according to the Kessner Index while a slightly higher percentage (80.1%) obtained adequate plus or adequate care based on Kotelchuck.
- For 2009 births, one in eleven (9.2%) county births was delivered by women who had used tobacco while pregnant, higher than the 2008 state level at 7.9%. The county's level of tobacco use during pregnancy has fluctuated a bit over the past decade, but generally is lower than during the 1990s. Far fewer DeKalb County women report using alcohol during pregnancy than smoking. Researchers widely believe that drinking alcohol during pregnancy is under-reported on the birth certificate. In 2009, just two (0.2%) mothers reported drinking alcohol during pregnancy.
- During 2004-2008, 74 DeKalb County infants were born with cardiovascular defects, a rate of 116.7 per 10,000 births, compared to 112.9 for Illinois. The number of newborns with cardiovascular defects was followed by perinatal deaths, which stood at 68, for a rate of 107.3. The rate of genitourinary defects (69.4) locally was somewhat higher than for the state (60.3), while rates for central nervous defects, alimentary tract, musculoskeletal defect, chromosomal defect, serious congenital infection, and fetal alcohol syndrome fell below Illinois levels.
- Over one-third (34.1%) of DeKalb County 2008 births were delivered by Cesarean section, a bit higher than 30.6% for Illinois. The proportion of vaginal deliveries stood at 64.8% in 2008, slightly below the state (67.5%). Just nine DeKalb County births were VBAC births in 2008.
- According to data obtained from the Strong Start program of the Illinois Department of Human Services for the combined five-year period 2005-2009, DeKalb County experienced 2,754 Medicaid births, accounting for 42.6% of all births. In 1993, Medicaid births constituted just 21% of all births. Premature Medicaid births, early deliveries before 37 weeks, totaled 283 constituting 10.3% of Medicaid births.
- DeKalb County women recorded 270 abortions in 2009, the highest number since at least 1995 (Table 9.19). The county has experienced a rapid increase of abortions since 2005, when the number was 148. With 206.5 induced pregnancy terminations per 1,000 births, the 2009 county rate is the highest since 1996.
- DeKalb County reported 11 infant deaths in 2009, a rate of 8.3 deaths per 1,000 live births. 2009's infant death rate was higher than both the state (6.9) and U.S. (6.5). Until 2001, DeKalb County's rate was generally lower than Illinois and the nation. However, the county infant death rate has been higher than the state and U.S. for five of the last ten years.

- In 2009, City of DeKalb residents had 581 births for a crude birth rate of 13.2, while Sycamore residents recorded 273 births with a crude birth rate of 15.6. Most minority births took place in DeKalb. Unmarried mothers were more common in DeKalb (42.9%) than Sycamore (29.3%).

Chapter 10: Deaths

- DeKalb County recorded 675 deaths in 2009 yielding a crude death rate of 6.3 deaths per 1,000 population. Nursing homes (36.5%) were the leading place of death, followed by hospitals (27.6%) and home (24.7%). The crude death rate has been somewhat variable over the past decades with a range from a high of 7.4 in 1984 to a low of 5.9 in both 2007 and 2008. DeKalb County crude death rates have consistently fallen below state and national levels. When the effects of the population's age structure are eliminated through the use of age-adjusted rates, the DeKalb County age-adjusted rate is slightly lower than the state (7.6) and nation (7.5) with an age-adjusted rate of 7.4.
- Minority deaths are relatively few owing to the young age structure of these groups and the relatively small size of these populations in DeKalb County. For 2007-2009, black deaths totaled 32, yielding a crude death rate of 156.7 per 100,000 population and an age-adjusted rate of 793.3. Hispanic deaths for 2007-2009 also numbered 32 for a crude death rate of 105.6 and an age-adjusted rate of 364.8.
- During 2007-2009, DeKalb County rates were below the nation for most age groups. The only exceptions were infant deaths and the elderly aged 75+.
- Heart disease and cancer together account for almost half (45.1%) of all deaths with 441 heart disease and 426 cancer deaths for 2007-2009. Following were stroke (111), accidents (109), Alzheimer's (99) and chronic lower respiratory disease (CLRD) (88).
- When compared to the nation, the DeKalb County age-adjusted death rate for heart disease is much lower (168.9) than the nation (185.8). The county is also substantially under the U.S. death rate for chronic lower respiratory disease, cancer, and influenza/pneumonia. Substantially above the nation are the DeKalb County rates for Alzheimer's, Parkinson's, diabetes, and stroke. Overall, cancer for DeKalb County (168.8) is below the nation (185.8). In terms of cancer sites, lung cancer is the clear leader, although the age-adjusted rate for DeKalb County is substantially under the nation. Colorectal, the second most common cancer site, on the other hand, is one-fourth higher than the U.S.
- Although many more DeKalb County women died than men, the male age-adjusted rate for all causes is 851.6 per 100,000 population, nearly one-third higher than the female rate of 648.0. Cancer (195.0) is 27.9% higher for men when compared to women (152.4). Additionally, heart disease is higher for men (148.3) than women (135.4). Men also exhibit higher rates for most other causes with the largest gaps apparent for accidents and suicide. For suicide in the 2007-2009 period, six male suicides took place for every one female suicide.
- Perinatal conditions accounted for nearly half (42.9%) of all deaths among 0-14-year-olds in 2007-2009. Accidents claim almost half (43.2%) of all deaths in the 15-44 age group, while for middle-aged residents aged 45-64, cancer was the number one killer, accounting for one-third (34.7%) of all deaths. Cancer (37%) also produced the most deaths among the "young elderly," persons aged 65-74. Among those 75+, heart disease was the leading cause, accounting for one-fourth (25.6%) of deaths.
- For 2009, the life expectancy for DeKalb County is 77.5 for men and 81.3 for women, a difference of nearly four years. DeKalb County life expectancy is exactly the same as the U.S. level for women, but the DeKalb County male life expectancy is 1.3 years better than the nation.
- During the 2007-2009 period, 440 or 22.9% deaths involved individuals under age 65, somewhat better than the U.S. at 27.5%. For minority groups, though based on small numbers, the proportions dying prior

to age 65 is far higher, five of every eight (62.5%) Hispanic deaths and more than half (53.1%) of black deaths. Suicide is most apt to be an early death in that 78.6% of 2007-2009 suicides were before age 65. Accidental deaths involve persons under age 65 nearly three-fourths (74.3%) of the time.

Chapter 11: Health Status and Behaviors

- More than half (54.5%) of DeKalb County adults consider themselves to be in very good or excellent health according to the latest results of the Behavioral Risk Factor Surveillance Survey. While this level is similar to the state at 55.1%, the 2009 figure represents a decline from the county's 2004 figure of 57.9%. Just under one in twenty DeKalb County adults (4.5%) rated their health as poor in 2009, a higher proportion than reported in earlier surveys.
- The majority (60.8%) of DeKalb County adults enjoyed good mental health during all days of the past month in 2009, similar to the state level, while 16.9% of DeKalb adults said they experienced poor mental health for more than one week of the past month, the highest proportion in all of the survey administrations.
- Over one-fourth of DeKalb County adults have high cholesterol (27.3%) or high blood pressure (25.9%), according to the BRFS, and 18.2% of DeKalb County adults suffer from arthritis, with 18.5% who live with asthma. Diabetes afflicts 4.4% of the county's population 18 years and older, much lower than the Illinois rate of 8.2%. At 65+ county prevalence is much higher - arthritis (56.1%), high blood pressure (55.9%), high cholesterol (45.6%) and diabetes (18.9%).
- When applying national prevalence rates to the county population, lower back pain and chronic joint symptoms top the list of chronic conditions, each having more than 20,000 individuals with one of these conditions. Hypertension (18,111), arthritis (15,670), and migraines (14,109) are next highest in prevalence. By age group, DeKalb County residents aged 18-44 are most likely to suffer from lower back pain, migraines, and chronic joint symptoms, while middle-aged adults aged 45-64 most commonly have chronic joint symptoms, lower back pain, and arthritis. Hypertension, arthritis, and chronic joint symptoms occur at higher levels than other chronic conditions among the county's elderly, both those 65-74 and 75+.
- Almost two-thirds (64.4%) of DeKalb county adults are overweight or obese based on body mass index (BMI) calculated from height and weight, a level above the state at 61.5%. The proportion of obese individuals has risen substantially since 2001, when the proportion stood at 18.8%.
- More than one in five DeKalb County adults are at risk for binge drinking based on their alcohol consumption, the lowest level since 1997, but well above the Illinois rate of 18.3%. The proportion of DeKalb County adults who currently smoke is 29.5%, much higher than previous rates and 75% higher than the 16.9% for the state.
- Showing levels lower than the state, 86.2% of all DeKalb County women aged 40 years and older have had a mammography exam, with 56.2% reporting their most recent mammogram within the past year. Rates of pap smears among DeKalb County women are very high, standing at 98.3%, compared to 92.6% for Illinois.
- In 2004 almost two-thirds (63.9%) of men aged 40 years or older had obtained a PSA test. A greater proportion (82.3%) have had the other test, a digital rectal exam. The 2004 screening levels of both these tests were higher for DeKalb County men than for the state in 2009.
- Among the population 50 years and older in 2009, 65.3% have received a colonoscopy or sigmoidoscopy, while 51.7% have completed a blood stool test.

- For the five-year period 2004-2008, DeKalb County's average annual age-adjusted cancer incidence rate of 479.4 cases per 100,000 population was a bit lower than the state's 490.4. Similar to the statewide picture, cancer occurs more often in DeKalb County men (a rate of 547.9) than women (438.7).
- The leading cancer sites for men are prostate, lung, and colon/rectum. For women, breast, colon/rectum, and lung are the leading incidence sites. Aside from gender specific sites, men reveal higher rates of incidence for all cancer sites except bones/joints.
- In 2011, hepatitis led all other reportable communicable diseases with the three forms of hepatitis, A, B and C, accounting for 15 cases (13 cases of hepatitis C and two cases of hepatitis B), followed by salmonella with 13 cases and giardiasis with 11 cases.
- Sexually transmitted diseases (STDs) comprise a major group of infectious diseases with required reporting of three forms: syphilis, chlamydia and gonorrhea. DeKalb County has witnessed an upward chlamydia rate trend since the early 1990s, hitting a fifteen-year high in 2006 (519.3 cases per 100,000 population). The 2009 level of 406 cases for a rate of 456.3 is more than double the 1994 rate of 204.0, although declining since 2006. Consistently, the county's rates have exceeded the state-except-Chicago rates and, in some years, have also been above the total state rates.
- DeKalb County reported a gonorrhea rate of 79.8 in 2009, about half the Illinois rate of 160.7 and lower than the state-except-Chicago rate of 94.0. For all of the past 20 years, the county's gonorrhea rate has fallen below the total state and state-except-Chicago rates, usually by a wide margin. In recent years, syphilis has become a relatively infrequent disease, although 2009 saw an increase in early syphilis from just one case or none since 2002 to four cases in 2009.
- Four AIDS cases were reported in the county in 2011 for a cumulative total of 16 cases since January 2005, a rate of 2.1 per 100,000 population. The rate of AIDS cases is well below the Illinois rate of 8.6. HIV had six reported cases in 2011, with a total of 33 cases reported since January 1, 2005. This translates to a rate of 4.4 per 100,000 population, much lower than the state's 14.7.
- Four children, or 0.3% of those tested in 2010, showed blood lead levels of 15 or more micrograms per deciliter (mcg/dL). Each year since 2004, the proportion of tested children with blood lead levels of 15+ mcg/dL has been below one percent.
- On December 1, 2010, a total of 2,223 DeKalb County students were receiving special education services. Of these, 306 (13.8%) were ages 3-5, while 1,917 (86.2%) were ages 6-21. The largest categories of student exceptional characteristics are specific learning disability (32.7%) and speech/language impairment (20.2%).
- Within the past year, at least 12,580 DeKalb County residents aged 18-54 can be estimated to have been affected by a mental disorder. The leading mental disorders are any anxiety disorder (16.4%) and any mood disorder (7.1%). An estimated 4,340 DeKalb County residents aged 55 and older have a mental disorder.
- The number of persons aged 12+ currently using illicit drugs based on 2010 population in DeKalb County is estimated to be about 7,948. Marijuana is the primary illegal substance used, an estimated 6,162 persons. Illicit drug use declines with age. By age group, 7,705 youth aged 12-17 are estimated to currently use an illegal drug, with 5,101 persons aged 18-25, and 3,824 aged 26 and older. Based on the national estimates, 6,634 whites, 563 blacks, and 636 Hispanics currently use an illegal drug. By gender, the number for DeKalb County males stands at 5,972, while 3,685 women currently use an illicit drug.

- During 2010, DeKalb County recorded seven traffic crash fatalities. One of the seven traffic crash fatalities (14.3%) involved alcohol impaired driving (blood alcohol content of .08 or higher), somewhat lower than 21.4% seen five years earlier.
- During 2010, Driving Under the Influence (DUI) arrests in DeKalb County totaled 585, for a rate of 694.9 DUI arrests per 100,000 DeKalb County residents aged 16 and older, higher than the Illinois rate of 416.0.

Chapter 12: Health Resources and Utilization

- According to the 2009 BRFSS, 89.3% of DeKalb County adult residents have a health plan which covers them, a level which exceeds the state proportion of 85.4%. Only 78.9% of residents have a “usual health care provider” considerably below the state level of 84.4%. One of six residents (16.1%) have avoided the doctor in the past year due to cost, up from 7.4% in 2002 and higher than the 2008 state level of 12.4%. An additional 18.2% avoided getting medications due to cost, twice the state rate of 9.2%.
- Similar 2008 data for dental insurance reveals that the proportion of the adult population with dental insurance stands at 71.6%, compared to 61.9% for the state (2006). However, about one-fourth of DeKalb County residents reported not being able to afford a dentist in the past year, up from 14.9% in 2004, and considerably higher than the 2006 state rate of 13.5%.
- The ACS results for health coverage (89.8%) are virtually identical to the Illinois BRFSS. Public coverage, primarily Medicare and Medicaid, is shown at 21.1% and 10.2% are estimated to be uninsured. DeKalb County appears to have more insured and fewer uninsured than the nation, with somewhat less dependence on public programs.
- The total number of DeKalb County residents enrolled in Medicare in 2010 was 12,417, or 11.8% of the population. Total Medicare recipients have grown 18.1% since 2003, or slightly faster than the overall population. Disabled persons enrolled in Medicare total 1,663 and have grown 44.6% since 2003, much faster than gains in elderly enrollment.
- DeKalb County residents are hospitalized as inpatients somewhat less frequently than the nation. With a 2011 rate of 1,010.2 hospitalizations per 10,000 population, the county’s rate falls below the U.S. 2009 level of 1,181.2. The DeKalb County use is 14.5% under the nation. In 2006, the county was 9.8% below the nation with a rate of 1,075.5. Females (1,184.8) are 42.1% more likely to have been an hospital inpatient during 2011 than males (834.0). DeKalb County hospitalization rates are below U.S. rates for age groups 15-44 and 45-64, but higher for the 0-14 and 65+ age groups.
- Being a normal newborn was the leading reason that DeKalb County residents were hospital inpatients in 2011, with 875 discharges or 8.3% of all inpatients. The most frequent non-birth related diagnosis in 2011 was psychoses, with 540 cases. The DeKalb hospitalization rate for psychoses was 22.8% below the state.
- Of the top ten DRGs, four are related to delivery including normal newborn (1), vaginal delivery uncomplicated (2) and Cesareans, both uncomplicated (5) and complicated (9). In addition to psychoses (3), other leading hospitalization reasons were major joint replacement or reattachment of a lower extremity (4), esophagitis, gastroenteritis or other uncomplicated digestive disorders (6), pneumonia (7), cellulitis (8) and kidney/ urinary tract infection (10).
- The leading DRGs which occur at higher rates than Illinois include cardiac arrhythmia, Cesarean-uncomplicated, pneumonia, joint replacement-lower and COPD. Much lower than the state were 2011 hospitalizations for substance abuse, septicemia, neonates with problems, vaginal delivery-complicated, and heart failure.

- When patient days are viewed, psychoses becomes the leading hospital reason by a wide margin, generating 4,209 patient days with an average length of stay of 7.2 days. On an average day, 11.5 DeKalb County residents are hospitalized in community and specialty hospitals for psychoses.
- In terms of charges, the clear leader is lower joint replacements, which generate charges of \$20.6 million. Charges are also substantial for psychoses (\$8 million) and uncomplicated vaginal delivery (\$7.3 million). Above five million in total charges are recorded for Cesarean uncomplicated, digestive disorders, pneumonia, septicemia, and PCTA with stent.
- Three uncomplicated delivery and birth reasons (vaginal delivery, normal newborn, Cesarean) lead the hospitalization reasons for females, while normal newborn is first for males. Psychoses discharges in 2011 were relatively similar by gender, but women were more likely to experience major lower joint procedures. Women were also more likely to have digestive admissions, kidney/UTI, cellulitis, and metabolic plus uterine non-malignancy.
- For children under the age of 5, non-birth activity tended to be respiratory related, including pneumonia, bronchitis and asthma, respiratory distress, otitis media and URI. Prematurity generates extremely expensive cases, often over \$100,000 in charges for each premature infant. Behavioral reasons dominate hospital activity for persons aged 5-14 with psychoses easily first, followed by personality disorders/impulse control. Psychoses continues to lead non-birth hospitalization reasons in the 15-44 age group. Major lower joint procedures are on top for both those aged 45-64 and 65-74. In the oldest age group, 75+, pneumonia leads.
- According to 2011 COMPdata, residents of DeKalb County made 31,467 visits to hospital emergency departments. The rate is 300.4 per 1,000 population or three visits for every hundred persons. ED use is greatest for children aged 0-4, 681.9 visits for every one thousand children in the age group.
- Upper respiratory conditions account for the three most common ED 2011 visit reasons - otitis media, acute pharyngitis, and acute URI. Combined with other respiratory conditions in the top 25, the number of cases for 2011 was 3,789, or more than ten a day. Other conditions in the top ten include headache, gastroenteritis, urinary tract infections, chest pain, bronchitis, and abdominal pain. In terms of cost among the leading reasons, chest pain (about \$9,000 charge per visit) is most costly followed by syncope (\$7,400) and abdominal pain (\$5,300).
- Kishwaukee Community Hospital is the largest with 94 beds, with nearly 6,000 admissions in 2010 which generated 20,000 patient days. Valley West is smaller with a 2010 average daily census of 8.8. Medicare is the largest payor for inpatient services, covering about half of patients at each facility. Other insurance and Medicaid provide coverage for most of the remaining patients.
- On December 31, 2010 a total of 658 persons were residing in DeKalb County nursing homes, 620 in nursing care, 13 in an ICF/DD and 25 in sheltered care. About one in five (19%) had a primary diagnosis of Alzheimer's Disease, while 16.9% were in the facility due to circulatory system disorders. In nursing care, women predominated, outnumbering men with 441 (71.1%) female residents compared to 179 (28.9%) male. Over half (51.5%) of nursing care residents were aged 75 or older at the end of 2010. Medicaid (46.7%) is the largest payment source.
- DeKalb County is home to two assisted living facilities which provide more of a social than medical environment for older persons. They are Grand Victorian with 61 beds and Lincolnshire Place with 40 beds. Both are located in Sycamore.
- According to the 2008-2010 ACS, 5,375 DeKalb County residents are employed in health care and social assistance. Of these, 83.5% are female. Median earnings are \$25,959.

- According to the American Medical Association (AMA), on December 31, 2010, 79 physicians provided patient care in DeKalb County, similar to 78 six years earlier. The 2010 population per physician was 1,331.1 compared to the U.S. level of 410.7. Of the 79 patient care physicians in 2010, 11 were in family or general practice, 27 in medical specialties, 25 in surgical specialties and 13 in other specialties. Three were engaged in hospital-based practice. Physician availability relative to the population trails the U.S. in all specialty types.

Chapter 13: Crime and Violence

- The 2,741 crimes committed in DeKalb County during 2009 yielded a rate of 2,578.0 crimes per 100,000 population, lower than Illinois' 3,299.8. DeKalb County had lower rates than Illinois in 2009 for all offenses except sexual assault. The county's one-year crime rate fell by 2.8% from 2,651.1 in 2008, and is the lowest level recorded in at least 20 years.
- The City of DeKalb's 2009 crime rate of 3,573.8 was highest, by far, among DeKalb County communities, and was 6.7% higher than 2008's rate of 3,350.9. DeKalb was followed by the DeKalb County portion of Somonauk (2,093.9) and Sycamore (1,736.5). The DeKalb County Sheriff's Department recorded a 2009 crime rate of just 1,578.5, falling by 17.4% from 2008's rate of 1,912.0. The county's lowest 2009 crime rate was recorded in Malta (423.0).
- Northern Illinois University recorded 209 crimes during 2009, dropping 1.9% from 213 crimes in 2008. Three-fourths of these crimes were thefts.
- During 2011, the DeKalb Police Department arrested 2,872 persons, 2,412 adults and 460 juveniles. Of the adults arrested, 70.9% were male with 29.1% female. Males (62.1%) also dominated juvenile arrests. For adults, the peak age of arrest is 20, accounting for 15.5% of all adult arrests. Among juveniles, almost three in ten (29.1%) of those arrested are 16 years of age, followed by 17 at 24.6%.
- In 2009, the county recorded 571 drug arrests, for a rate of 537.1 arrests per 100,000 population. The number of drug arrests rose from 525 in 2008, and has shown a slight increase (+1.2%) since 2000. Generally, about 90% of drug arrests are for cannabis or drug paraphernalia. The rate of 537.1 drug arrests per 100,000 DeKalb County population was well below the Illinois rate of 742.7. However, the 2009 DeKalb County arrest rate for drug paraphernalia (193.8) is 77% higher than the state rate of 109.6.
- In 2011, the DeKalb Police Department, Sycamore Police Department, and the DeKalb County Sheriff's Department responded to 1,488 domestic related reports, with DeKalb Police responding to the largest number of calls - 901.
- Safe Passage, DeKalb County's domestic violence agency, saw 587 clients during FY2011. Of these, 484 (82.5%) were females, with the vast majority of male clients being children. Overall, 73.1% of the program's clients were adults aged 16 and older. By race, 60.1% were white, with 16.9% black, 14.1% Hispanic and 3.1% bi-racial or another race. Over eight in ten of the program's adult clients were either married (40.2%) or single (42.4%), while 11.1% were divorced. Almost half (47.5%) of the adult clients were employed; however 21.1% reported no income.
- During 2009, the average daily population (ADP) at the DeKalb County jail was 117 persons, down slightly from 124 in 2008, for a rate of 109.4 per 100,000 population. This average number was almost double the daily jail population in 1995.
- Elder abuse reports in DeKalb County have risen dramatically since initiation of the Illinois Elder Abuse and Neglect Program of 1991. DeKalb County recorded 100 reports of elder abuse during FY2011, for a rate of 7.5 per 1,000 persons aged 60 and older, the most reports since 1993. During 1993, just 12

elder abuse reports were received. However, better reporting procedures could account for part of the increase.

- During FY2010, reports of child abuse in DeKalb County numbered 696, a rate of 29.6 per 1,000 children aged 0-17, exactly the same as the Illinois rate, and the lowest county rate since 2004. Of the reported cases, 169 (24.2% of reported) were indicated, for a rate of 7.2, lower than the state indicated rate of 8.3.
- Historically, the rate of reported child abuse in DeKalb County has fluctuated a bit since 1990. The highest child abuse report rate was in 1994 (44.2), with the lowest occurring in 2004 (27.1). Correspondingly, indicated cases of child abuse fluctuated widely, with a low of 6.0 in 2007 and a high rate of 22.2 in 1991.
- As of December 31, 2010 DeKalb County had 137 active juvenile cases. Of these, 62 or 45.3% were probation cases, while 61 (44.5%) were being continued under supervision. Juvenile programs were ordered for 103 youth, with 18.4% of the juveniles referred to alcohol and drug programs and 11.7% ordered to mental health programs.

Chapter 2 POPULATION

Population

According to the 2010 Census, the population of DeKalb County stood at 105,160, up 18.2% from 88,969 in 2000. Table 2.1 details this and last century's population for DeKalb County. The county is presently the state's twentieth largest county and was the fifth fastest growing Illinois county from 2000-2010.

Table 2.1
DEKALB COUNTY
POPULATION: 1900 - 2011

Year	Population	Percent Change
2011 (Est.)	104,743	-0.4%
2010	105,160	+18.2%
2000	88,969	+14.2%
1990	77,932	+4.4%
1980	74,628	+4.2%
1970	71,654	+38.6%
1960	51,714	+26.8%
1950	40,781	+18.6%
1940	34,388	+5.3%
1930	32,644	+4.2%
1920	31,339	-6.3%
1910	33,457	+5.4%
1900	31,756	---

Source: U.S. Census Bureau: decennial counts as of April 1; 2011 estimate for July 1-percent change since April 1, 2010.

DeKalb County has grown in all decades since 1900 except for 1910-1920. The greatest growth took place following the broadening of Northern Illinois University by the state in 1955, with peak gains in the 1960s when the county added nearly 20,000 persons and grew by 38.6%. The most recent decade, 2000-2010, recorded the second largest numerical gain, adding 16,191 persons.

The Census Bureau estimates the July 1, 2011 DeKalb County population at 104,743, yielding an estimated loss of 417 persons since April 1, 2010.

With a 2010 land area of 6,313 square miles, the DeKalb County density was 166.6 persons per square mile compared to 231.1 for Illinois and 87.4 for the nation.

Table 2.2 displays the population from 1980-2010 for all incorporated places (cities, villages) within the county along with minor civil divisions (townships).

Source: Census Bureau Decennial Census.

Among the twelve DeKalb County incorporated communities, all except Shabbona (-0.4%) experienced 2000-2010 growth. Cortland more than doubled (+106.7%) in the decade to lead DeKalb County places, followed by Kirkland (+49.6%), Somonauk (+46.2%) and Sycamore (+45.7%).

DeKalb (43,862) is the county's largest community, with Sycamore (17,519) next in size. These two adjacent cities contain 58.4% of the county's entire population. Sandwich (7,421), Genoa (5,193) and Cortland (4,270) stand third to fifth among communities.

When viewed by township, DeKalb Township (46,781), Sycamore Township (14,425) and Cortland Township (10,968) account for two-thirds (68.6%) of county residents. Fastest growing from 2000-2010 among townships were Cortland (+57%), Sycamore (+38.7%), Genoa (+36.6%), and Afton (+34.5%). Five townships lost population in the past decade including Victor (-17.9%), Milan (-9.1%), South Grove (-4.3%), Pierce (-4%), and Shabbona (-0.1%).

Migration and Components of Change

Population change is composed of both natural increase (births minus deaths) and migration, both domestic and foreign. The Census Bureau presents components of change as part of their estimates program. The last relevant data were part of the 2009 estimates. Table 2.3 shows change components estimates for 2000-2009 with a comparison to 1990-1999.

Of the 18,358 estimated 2000-2009 growth, about two-thirds (68.4%) was due to net in-migration. Of the estimated 12,562 net in-migration, 10,123 came from within the United States and 2,439 originated in other nations. International migrants may be foreign nationals or American citizens. Estimated growth for the prior 1990-1999 decade was only 9,061 or half of the 2000-2009 period. Growth from international net migration was greater than domestic migration in the recent decade.

Because the Census Bureau overestimated the 2009 DeKalb County population at 107,333 (more than 2,000 higher than the 2010 decennial census count) migration likely was slightly lower than estimated.

Table 2.3

IRS County Migration Data

County-to-county migration data provided by the Internal Revenue Service show movement patterns among counties based on year-to-year changes in the addresses entered on income tax returns from individual taxpayers. Persons not filing a tax return are not part of these figures. All 1040 forms filed by citizens and resident aliens are included in the database with social security numbers used for matching purposes, but only for the primary taxpayer in the household.

IRS migration summaries for the past decade (Table 2.4) shows that DeKalb County has changed from being an in-migration area, the case in the past decade until 2007, to a net loss from 2007-2010. The major change appears to be fewer persons entering DeKalb County since those leaving was relatively constant. In the most recent years for which IRS data are available, 2009 to 2010, 4,362 persons entered the county while 5,086 left, based on tax filings.

Table 2.4

As Table 2.6 illustrates, migration figures show Kane and Cook Counties as the major sources of both in- and out-migrants. For the years 2009-2010, a net in-migration of 41 occurred with Kane and 19 with Cook. Residents are lost to DuPage (-29) and Ogle (-42) Counties.

Average household income for both in- and out-migrant householdss is also provided by the IRS in the geographical movement data. In-migrants (\$31,016) had slightly lower incomes than those who left DeKalb County (\$32,640) for 2009-2010.

As Table 2.7 reveals, household income levels for movers have shifted downward abruptly over the past five years. With a slowdown of in-migrants, the mover mix now may be reflecting a higher college student proportion.

Chapter 3
RACE, ETHNICITY, LANGUAGE, ANCESTRY

Race

According to the 2010 Census, the racial composition of DeKalb County was 85.1% white, 6.4% black and 2.3% Asian. Other categories total four percent while two percent name more than one race. Hispanic is considered an ethnic group rather than a race. About half of Hispanics choose white and nearly half choose “other” for their racial designation. Table 3.1 arrays race and Hispanic origin for DeKalb County for 2000 and 2010.

Table 3.1

Source: U.S. Census Bureau: 2000 and 2010 Censuses.

All racial groups experienced growth from 2000-2010 led by “other”, +71%, a reflection of Hispanic growth, black (+64.8%), and “multiple races” (50%). The Asian population rose 13.7% over the decade and the white population grew by 13.7%. The population of the county overall gained 18.2% from 2000-2010.

Among racial groups, the black population has risen appreciably in terms of percentage from 2.2% in 1980 to 6.4% in 2010 (Table 3.2). Asians rose from one percent in 1980 to 2.2% in 1990, but has been relatively stable since. Before 2010, the Asian population also included Pacific Islanders, but now Hawaiian and Other Pacific Islander are combined. However, only 23 DeKalb County residents fell into this racial category in 2010.

Hispanic Ethnicity

Hispanic is considered an ethnic identity, not a race, by the Census Bureau. The term was first adopted for the 1980 Census. Before then, the Census counted Spanish-speaking individuals or counted Spanish surnames in some western states. Hispanics generally trace their roots to a Spanish-speaking nation, although both race and ethnic categories are self-designated.

The 2010 DeKalb County Hispanic count stood at 10,647 or one of every ten (10.1%) residents. Expansion of the Hispanic population has been rapid. The 2000 Census found 5,830 Hispanic individuals so that the 2000-2010 increase stood at 82.6% (Table 3.2). In 1980, the county contained only 1,405 Hispanic residents.

With the Census separation of race and ethnicity, how do Hispanics describe their race. Table 3.3 details the 2000 and 2010 distributions. In both years, about half of Hispanics said their race was white. Most of the remainder marked "other."

decennial Census.

Race/Ethnicity

As the Hispanic population has grown, consideration of race and ethnicity concurrently is of interest especially because many organizations maintain records in this manner. Table 3.5 reveals race/ethnic identification for DeKalb County residents.

Eight of ten (79.7%) residents are white non-Hispanic. Next in size are Hispanics (10.1%) and blacks (6.3%), followed by Asians (2.3%). When compared to the state and nation, all minority groups are present at lower levels in DeKalb County. Nationally and in Illinois just 63.7% are white non-Hispanic.

For the larger communities of DeKalb and Sycamore, 2010 minority presence is slightly higher than for the remainder of the county. DeKalb is 12.5% Hispanic and 12.5% black, both up from 9% ten years earlier. Sycamore is 7% Hispanic, but only 2.8% black.

Impact of Northern Illinois University

For decennial censuses, college students are counted at their college residence rather than their hometown or parents' home with the actual count taking place on April 1 of the decennial census year.

Northern Illinois University publishes student demographics annually in the Data Book. Fall 2010 enrollment by race/ethnicity is shown in Table 3.7. Not all students live on campus or elsewhere in DeKalb County.

A comparison of NIU race/ethnic composition (Table 3.8) reveals that students may constitute a significant proportion of DeKalb County's black and Asian population depending on whether their residence is local..

Table 3.8
NIU MINORITY STUDENTS COMPARED TO DEKALB COUNTY

Race/Ethnicity	NIU Students	DeKalb County	Percent NIU
Black	2,738	6,579	41.6%
Hispanic	1,673	10,647	15.7%
Asian	1,322	2,400	55.1%

Age Differences in Racial Composition

Tables 3.9 and 3.10 display the age distributions for race and race/ethnic groups. These tables serve to illustrate that minority presence is much higher in youth than older populations.

For instance, 10.9% of children under age 5 are black non-Hispanic compared to 6.3% for the entire DeKalb County populace. Also, only 1.5% of blacks are aged 65+.

With the Hispanic group, 11.9% are children aged 0-4 compared to just 2% of Hispanics who are senior citizens aged 65+.

Race/Ethnicity of Public School Students

Another view of youth diversity may be seen through Fall Housing Reports filed by DeKalb County public school districts. Table 3.11 shows that District #428, the DeKalb schools, is the most diverse with only 59% white non-Hispanic, as well as 21.2% Hispanic and 13.3% black. Sizeable Hispanic student presence also appears in Genoa-Kingston #424 (13.3%) and Hinckley-Big Rock #429 (10.6%).

Minority student growth over the last five years is evident by comparing the data in Tables 3.11 and 3.12. During the period, Hispanic student proportion grew by 5.3% and the black student proportion by 3.4% in the DeKalb schools. Hispanic gains exceeded 3% in Hinckley-Big Rock, Sycamore and Hiawatha. For the DeKalb schools the white non-Hispanic percent fell by more than 10%, from 69.6% in 2005-2006 to 59% in 2010-2011.

Ancestry

The Census Bureau collects information on the ancestry of individuals which is their self-identification of heritage or nationality of descent. Respondents are allowed to name up to two ancestries, although ancestry identification has been declining over time. Results of this tabulation for DeKalb County for 2006-2010 from the American Community Survey appears in Table 3.13 with comparison to Illinois and the nation.

The two leading ancestries locally are German (32.4% designating) and Irish (17.4%). Other ancestries named by 5% or more of respondents were English (8.6%), Polish (7%), Italian (6.4%) and Swedish (6.3%).

Table 3.13

Source: U.S. Census Bureau: 2006-2010 American
Community Survey

As compared to the nation, the area has nearly twice the percent, 32.4%, of German ancestry than the nation (16.4%). Irish ancestry, at 17.4%, also exceeds the nation (11.8%) substantially. Present at levels well above the U.S. are Swedish (6.3% vs. 1.4%), Norwegian (4.7% vs. 1.5%) and Polish (7% vs. 3.2%)

Persons of Polish ancestry exhibited the largest decade change, rising to 7% in the 2006-2010 ACS from 4.6% in the 2000 Census.

Foreign Born and Citizenship

The vast majority of DeKalb County residents (93.4%) was born in the United States. According to the 2008-2010 American Community Survey, 6.6% are foreign born, much lower than either the state (13.8%) or nation (12.8%), as shown in Table 3.14. One-third of the foreign born have become citizens, a level somewhat lower than found for the state and U.S.

Of the 25,313 students enrolled at NIU in 2010, 603 (2.4%) were categorized as non-resident aliens.

Languages

The Census also asked persons aged five and older whether they speak a language other than English at home. Of the 98,363 DeKalb County residents five and older, 88.7% speak only English at home, while 11.3%, representing 11,090 persons, speak some other language at home.

As seen in Table 3.17, by far, the leading non-English language spoken at home is Spanish, spoken by 6,533 DeKalb County residents or 6.6%. Other language groupings spoken are Indo-European (2.7%) and Asian/Pacific Islander (1.6%).

Religion

To maintain separation of church and state, the Census Bureau does not collect information on religious membership. 2010 data was collected by the Association of Statisticians of American Religious Bodies (ASARB), continuing a once-in-a-decade series originally collected by the Glenmary Research Center.

The ASARB, through the Association of Religion Data Archives (ARDA), identified all religious bodies having U.S. congregations. Data were received from 236 religious bodies representing 344,894 congregations, the most comprehensive study of membership. Some groups were estimated based on available information.

Table 3.19 displays the religious bodies with the most adherents in DeKalb County from 2000 - 2010. Adherents are persons affiliated with the religion, whether members or not. For 2010, the leading religion in DeKalb County, by far, is the Catholic Church, with 19,447 adherents or 18.5% of the population. Following are United Methodist (5.6%), Evangelical Lutheran (4.5%), Muslim estimate (3.1%) and Lutheran-Missouri Synod (2.6%).

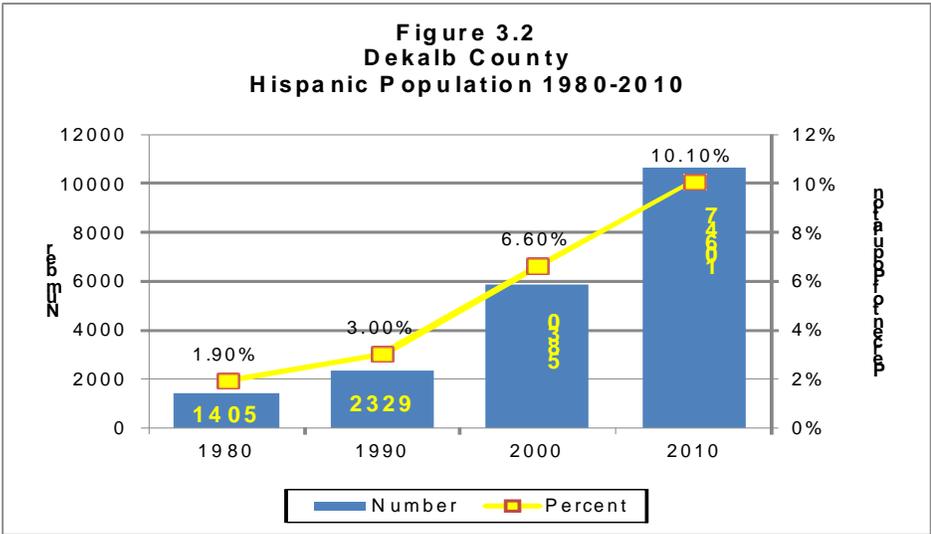

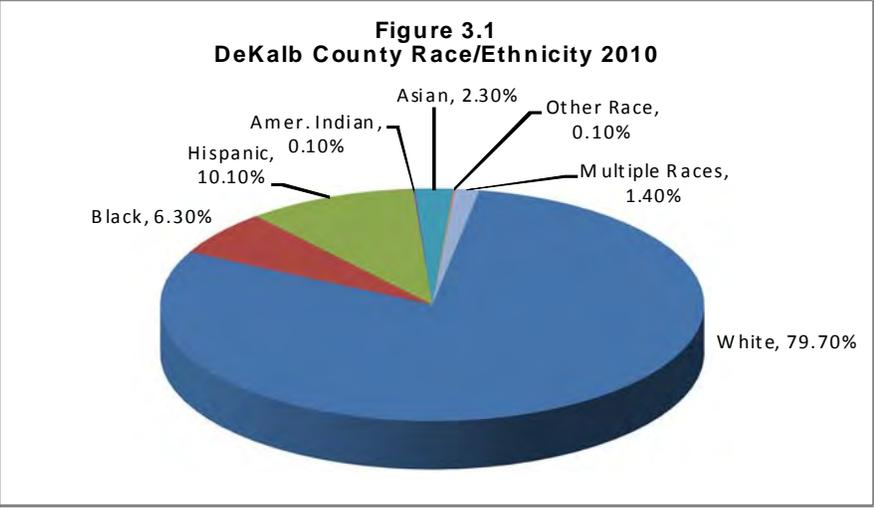

As compared to 2000 data, the Muslim and National Missionary Baptist growth were the greatest. Mainstream Christian churches tended to lose adherents.

Compared to the nation, the Catholic presence is similar, with an elevated Lutheran level than found for the U.S. overall.

Chapter 4
AGE AND GENDER

Age

The age structure of DeKalb County is dominated by the large number of students at NIU so that the 18-24 year-old cohort gives the county about double the proportion than present for the nation - 20.7% of residents are 18-24 compared to 9.9% for the nation.

Table 4.1
DEKALB COUNTY AND U.S.
AGE GROUPS: 2010

Age Group	DeKalb County		U.S. Percent
	Number	Percent	
Total	105,160	100.0%	100.0%
Under 5 Years	6,645	6.3%	6.5%
5 - 17 Years	16,845	16.0%	17.5%
18 - 24 Years	21,817	20.7%	9.9%
25 - 34 Years	14,767	14.0%	13.3%
35 - 44 Years	11,956	11.4%	13.3%

75 - 84 Years	3,366	3.2%	4.3%
85 Years and Over	1,576	1.5%	1.8%
Median Age (Years)	29.3		37.2
Under 18 Years	23,490	22.3%	24.0%
65 Years and Over	10,337	9.8%	13.0%

Source: U.S. Census Bureau 2010 Census.

As a result of the college student presence, the DeKalb County median age in 2010 was 29.3 years compared to 37.2 for the U.S. Otherwise, the age structure would be fairly typical, especially if the college students were excluded. Somewhat of a lower older group is present, 9.8% compared to 13.1% nationally for those aged 65+, but "baby boomers" 55-64 represent 9.8% of the population versus 11.8% for the U.S.

Although the DeKalb County median age has risen 2.2 years since 1990 (Table 4.2), the gain was substantially less than the 4.2 year increase for the nation.

Table 4.2
 DEKALB COUNTY AND U.S.
 MEDIAN AGE: 1990, 2000, AND 2010

Year	DeKalb County	U.S.
2010	29.3	37.2
2000	28.4	35.3
1990	27.1	32.8

Source: U.S. Census Bureau: 1990, 2000 and 2010 Censuses.

Table 4.3 reveals changes among age groups over the past two decades. From 1990-2000 the fastest growing age group was persons 45-54 which grew 47.7%. In the 2000-2010 decade, the largest growth was in the 55-64 age group, 66.1%. This expansion of the "boomers" indicates that DeKalb County will soon experience a larger senior citizen proportion.

As displayed in Table 4.4, the current median age of NIU students stands at 25.6 years, 21.3 for the larger undergraduate group and 31.5 for the graduate/professional students. Older students are becoming more common at NIU.

Median Age by Gender and Race/Ethnicity

Table 4.5 examines median age by gender and race/ethnicity from 1990 to 2010. For the latest decennial census in 2010, the median age for women was 30.3 years, 1.8 years older than males, owing primarily to gender differences in longevity. The minority population is substantially younger than the white non-Hispanic group. The black median age in 2010 was 20.5, with Hispanics at 22.5, compared to 33.4 for the white non-Hispanic group. The white non-Hispanic group has been aging with each Census, while the minority populace has remained relatively stable in regard to median age.

Table 4.5
DEKALB COUNTY
MEDIAN AGE BY GENDER AND RACE/ETHNICITY:
1990, 2000, AND 2010

Gender	2010	2000	1990	Race/Ethnicity	2010	2000	1990
Male	28.5	27.5	26.6	White Non-Hispanic	33.4	31.2	27.9
Female	30.3	29.2	27.6	Black	20.5	20.9	20.7
				Hispanic	22.5	22.5	22.2

Source: U.S. Census Bureau: 1990, 2000 and 2010 Censuses.

Gender Ratio

Overall, DeKalb County contains 52,530 males and 52,630 females for a gender ratio of 99.8 males per 100 females (Table 4.6). Males are the majority in most younger age groups. However, in senior cohorts, the gender ratios become increasingly lower with a ratio of 46.9 at 85 and older, or two women for every man.

Some variations in gender ratio are found by race/ethnic group, with an excess of males (104.5) in the Hispanic community and a deficit of males (81.5) among blacks (Table 4.7). The Hispanic growth in the state has been overly male. As a result, perhaps, the overall DeKalb County gender ratio has risen from 96.7 in 1990 to 99.8 currently. The black gender distribution appears to reflect the fact that more black females than males are in attendance at NIU.

Age and Gender for DeKalb and Sycamore

As seen in Table 4.8, in 2010, as expected, the City of DeKalb (23.6) has a much younger median age than Sycamore (34.9). DeKalb has a larger proportion of males (101.2 gender ratio) than Sycamore (95.2). Sycamore contains higher proportions of both children aged 0-17 and seniors aged 65+.

Chapter 5
HOUSEHOLD CHARACTERISTICS, MARITAL STATUS, AND MARRIAGE/DIVORCE

Household Relationships

In 2010, more than nine in ten (93.7%) DeKalb County residents lived in a household, which is defined by the Census Bureau as “one or more persons occupying a housing unit.” The majority of persons living in a household belong to a family (two or more related persons living together). Those not in a family are considered to be in a nonfamily household, defined as “people living alone and households which do not have any member related to the householder.” Each household has a “householder,” a term which replaced the former “head of household” used by the Census Bureau before 1990. Those who do not live in a household are in group quarters, which includes institutions, communal living, boarding houses, college dorms, and similar settings.

In DeKalb County, 39.1% of persons living in a household in 2010 were the householder, similar to state and national levels, while about one in five was a spouse. Over one-fourth (28.4%) of those in a household was a child, slightly lower than Illinois (30.7%) and the U.S. (29.5%). Nonrelatives accounted for one in ten household members, while “other relative” stood at 4.1%. The DeKalb County nonrelative proportion is well above that of the U.S. Table 5.1 arrays household relationships for DeKalb County, Illinois and the U.S. in 2010.

Household Structure

The number of DeKalb County households stood at 38,484 in the 2010 Census, up from 34,583 in 2000. Table 5.2 displays 2010 households by type for DeKalb County, Illinois, and the U.S.

In DeKalb County, 61.8% of households are family households, lower than the 65.8% for Illinois and 66.4% for the nation, most likely because of NIU students living in group quarters. The proportion of households which are the “traditional” married couple with children is rather low in today’s society. Only one in five (20.8%) DeKalb County households are of this type, similar to state (21.0%) and U.S. (20.2%) levels, but down a bit from 22.3% in 2000.

In 2010, the county contained 3,416 (8.8%) single parent households, up from 8.4% in the 2000 Census. Of the single parent households, three-fourths (74.8%) are headed by a female. The proportion of single father households rose from 1.4% in 2000 to 2.2% in 2010, while single mother households showed a slight decline, dropping from 7% to 6.6%.

Nonfamily households are 38.2% of DeKalb County households, a bit higher than the state and nation. Seniors and singles constitute the majority of these households, although in DeKalb County unrelated persons living together provide another significant group.

The average household size was 2.56 persons in the last Census, just slightly lower than both state (2.59) and U.S. (2.58) averages. The average family has just 3.11 persons, somewhat smaller than Illinois (3.20) and U.S. (3.14) families.

Table 5.3 shows average household and family size for DeKalb County and the U.S. from 1970-2010. Since 1970, the average size of a DeKalb County household declined steadily from 1970 through 1990, falling from 3.08 in 1970 to 2.64 in 1980, then dropping again to 2.56 in 1990. Since 1990, average household size has remained constant, about 2.56 persons. The average DeKalb County family size has followed a similar pattern, falling from 3.19 persons in 1980 to 3.10 in 1990, and standing at 3.11 for both 2000 and 2010. Historically, both local averages have been smaller than the U.S. average size.

When examined by race/ethnicity, Hispanic households (3.61) have a much higher average household size than either white non-Hispanic (2.48) or black non-Hispanic (2.40) households. The same is true for average family size in that the average Hispanic family contains 4.00 persons, compared to 3.03 for both white non-Hispanic and black non-Hispanic families.

Household Setting for Children

Over two-thirds (67.3%) of DeKalb County children under age 18 lived in a married couple family in 2010, higher than state (63.2%) and national (61.3%) proportions. The living situations of children by household type in 2010 is revealed in Table 5.4.

Living with a single female parent are 18.6% of DeKalb County children, while six percent reside with a single male parent. The level of children living with a single parent is comparable to those found statewide and for the nation. Just 6.1% of children locally live with "other relatives," with a few children also living with nonrelatives or residing in group quarters.

Nationally, a growth in the number of children being raised by grandparents has been observed in recent years. Table 5.5 contains 2010 Census data showing that, in DeKalb County, 1,052 children or 4.5%, were living in a home where a grandparent is the householder, somewhat below state (7.6%) and U.S. (7.9%) proportions.

Hispanic children are most likely to live with a grandparent, standing at 6.3%, although well below Illinois and U.S. levels. Just 3.2% of black (Hispanic or not) children live with a grandparent, far fewer than for the state (16.1%) and nation (13.2%). The proportion of white children living with a grandparent stands at 4.1% for the county.

Nearly one-third (31.9%) of all DeKalb County households contain a child under age 18.

Household Settings for the Elderly

As detailed in Table 5.6, in 2010, the vast majority (94.8%) of persons aged 65 and older in DeKalb County lived in a household, primarily as a householder or spouse. Almost three in ten (28.3%) of the county's elderly lived alone, primarily women. The number of elderly women living alone stood at 2,125 in the 2010 Census, representing one in five elderly.

One in nineteen (5.2%) DeKalb County elderly resides in group quarters, such as senior housing or nursing homes.

Although just 9.8% of the DeKalb County population is aged 65 or older, 18.8% of county households include a senior member.

Household Characteristics for DeKalb and Sycamore

Table 5.7 shows 2010 household characteristics for the cities of DeKalb and Sycamore. Households in both cities are smaller than the county overall (2.56). Average family size in both cities is also a bit below the DeKalb County average (3.11).

DeKalb is home to a smaller proportion of married-couple with children families (15%) compared to the county (20.8%) and Sycamore (22.9%). Single mother households are slightly more common in the two cities than for the county overall (6.6%).

Unmarried Partner Households

Since the 2000 Census, the Census Bureau has provided information about unmarried partner households, defined as “a household in which the householder and his or her partner are not legally married or participating in a common law marriage.” An unmarried partner is classified by the Census Bureau as “a person who is not related to the householder, who shares living quarters with, and who has a close personal relationship with the householder.” As outlined in Table 5.8, DeKalb County contained 2,772 unmarried partner households according to the 2010 Census. Of these, 92.8% are male/female households, with just 2.4% containing persons who are both male, and 4.8% in which the individuals are both female. The county has a lower proportion of same sex partners than found in the state or nation, especially for male/male households.

Persons in Group Quarters

Table 5.9 reveals that the number of DeKalb County residents living in group quarters in 2010 was 6,673, comprising 6.3% of the population. Those living in a college dormitory (5,844) accounted for 87.6% of these persons, while individuals in nursing homes comprised 8.5% of the group quarters population. Dorm residents are 5.6% of the county population. Few individuals locally reside in other types of group quarters. From 2000-2010, the proportion of residents in correctional institutions increased slightly, from 1% to 1.8%, as did persons in nursing homes, rising from 8.1% in 2000 to 8.5% in 2010.

The majority of **institutionalized** persons (76.9%) are aged 65+, living primarily in nursing homes (Table 5.10). All but 35 of those in noninstitutionalized group quarters are aged 18-64, most likely living in NIU dorms. Institutionalized persons are those living in “facilities that house those who are primarily ineligible, unable, or unlikely to participate in the labor force while residents.”

Marital Status

In the decennial Census, marital status was asked of all persons aged 15 and older. Table 5.12 illustrates the results of this question, with comparisons to the state and nation. Among DeKalb County residents, four in ten (40.2%) are single (never married), 46.3% are married, nine percent divorced or separated, and 4.4% widowed. The county contains elevated levels of never married individuals compared to the state and nation, most likely due to the presence of NIU students. A higher proportion of males than females are never married, while many more DeKalb County women (6.9%) than men (2%) are widowed, due to longer female longevity. Data for marital status reflect status at the time of the Census, not the individual's marital history. So, for instance, the proportion divorced does not include persons ever divorced.

Table 5.12
 DEKALB COUNTY, ILLINOIS, AND U.S.
 MARITAL STATUS BY GENDER OF PERSONS 15+: 2008-2010

Source: U.S. Census Bureau: 2008-2010 American Community Survey.

Compared to 2000, marital status is similar, although in 2008-2010 more individuals are never married (40.2% vs. 36.6% in 2000) and fewer are married (46.3% vs. 50% in 2000).

Marriage and Divorce

Table 5.13 examines marriages, divorces, and dissolution ratios (divorces per 100 marriages) for DeKalb County, Illinois, and the U.S. from 1980 through 2009. In 2009, DeKalb County residents recorded 546 marriages and 302 divorces for a dissolution ratio of 55.3 divorces for every 100 marriages, the highest ratio since 1998 and somewhat higher than the 2009 Illinois ratio of 44.6. DeKalb County recorded its highest dissolution ratio in 1998 at 66.5, with a low of 39.2 in 1983.

Chapter 6 HOUSING

Housing Units and Occupancy

DeKalb County contained 41,079 housing units in 2010. Of these 41,079 units, 6.3% or 2,595, were vacant on April 1, 2010 with vacancies far more common in rental units (7.1%) than owner-occupied units (2.3%). Table 6.1 details housing units and occupancy for 2010.

Table 6.1
DEKALB COUNTY, ILLINOIS, AND U.S.
HOUSING UNITS AND OCCUPANCY: 2010

Indicator	DeKalb County		Illinois Percent	U.S. Percent
	Number	Percent		
Housing Units	41,079	100.0%	100.0%	100.0%
Occupied	38,484	93.7%	90.1%	88.6%
Vacant	2,595	6.3%	9.9%	11.4%
Vacancy Rate (percent)				
Homeowner	2.3%		2.4%	2.4%
Rental	7.1%		7.4%	9.2%

Source: U.S. Census Bureau: 2010 Census.

Although the vacancy rate of 6.3% is less than the state (9.9%) and nation (11.4%), vacancies were up appreciably from 4% in 2000. Proportionally, rental vacancies grew the most, from 3.8% in 2000 to 7.1% in 2010.

One cause of the expansion of vacancies appears clear. The number of DeKalb County housing units grew by 24.5% in the decade while population only grew 18.2%, yielding a mismatch between supply and demand. As a result, sales slowed and prices declined.

Tenure

Home ownership stood at 61.2% of units in 2010, the highest level in recent decades. Home ownership was 59.5% in 2000. Illinois (67.5%) and the nation (65.1%) exhibit higher levels of home ownership. Tenure for DeKalb County, the state and U.S. from 1980-2010 are shown in Table 6.2

Renter-occupied units comprised 38.8% of the occupied housing in 2010, down slightly from 40.5% in 2000. With a major university present, the rental proportion is relatively high.

Table 6.2
DEKALB COUNTY, ILLINOIS, AND U.S.
HOME OWNERSHIP: 1980 - 2010

Year	Occupied Units		Illinois Percent	U.S. Percent
	Number	Percent ¹		
Owner-Occupied				
2010	23,547	61.2%	67.5%	65.1%
2000	18,861	59.5%	67.3%	66.2%

¹Percent of Occupied Units.

Source: U.S. Census Bureau: 1980 - 2010 Censuses.

As Table 6.3 illustrates, some home ownership differences exist according to the race/ethnic category of the householder in that the level of white non-Hispanic (66.5%) households who own their home is higher than Hispanic (45.4%) or Asian (32.6%), while black home ownership (12.7%) is considerably lower.

Table 6.3
DEKALB COUNTY
HOUSING TENURE BY RACE/ETHNIC: 2010

Race/Ethnic	Total	Owner	Renter	Percent Home Owners
White Non-Hispanic	32,694	21,741	10,953	66.5%
Black Non-Hispanic	2,156	273	1,883	12.7%
Hispanic	2,471	1,121	1,350	45.4%
Asian Non-Hispanic	755	246	509	32.6%

Source: U.S. Census Bureau: 2010 Census.

Another demographic characteristic that tends to differentiate the level of home ownership is the age of the householder. As shown below in Table 6.4, home ownership in 2010 peaked at 83.4% in the 65-74 age group, then fell somewhat among seniors aged 75+. During the past decade, home ownership rose in the 25-34 and 65+ age groups, but declined for all others.

Units in Structure

The area's housing stock in terms of structure was dominated in 2008-2010 by one-unit detached (single family) homes, comprising six in ten (59.2%) of the residential buildings. Another 9.8% are attached single units, such as townhouses. The next most common housing type is structures with 10 or more units, comprising 14.3% of structures.

¹Occupied and vacant.

Source: U.S. Census Bureau: 1990 and 2000 from decennial Censuses; 2008-2010 from American Community Survey

During the decade, the greatest proportional growth occurred among one-unit attached units, which nearly doubled (+191.9%). Single family homes (+23.2%) and 10+ units (+28.9%) grew by about a quarter. All other housing types dropped in the 2000 - 2008-2010 period. Countywide, 64,240 persons (65.2%) live in owner-occupied units compared to 34,247 (34.8%) in rentals. Group quarters are not included.

Rooms and Occupants

As Table 6.6 shows, the median number of rooms in DeKalb County housing units stood at 5.6 for the 2008-2010 American Community Survey. Owner-occupied units exhibit a median of 6.5 rooms, well above 4.1 rooms in renter-occupied units. Number of rooms grew from 2000. DeKalb County medians resemble the state and nation.

Table 6.6

Renter-Occupied	4.1	4.2	4.2

Source: U.S. Census Bureau: 2008-2010 American Community Survey.

One commonly used indicator of overcrowding is the proportion of units which have more than one person per room. The DeKalb County level of 2.6% of units overcrowded is the same as Illinois, but better than the nation's 3.2%. Overcrowding is slightly more common in rental units (3%) than owner-occupied units (2.5%). The 2.5% owner-occupied overcrowding is greater than the state (1.5%) and nation (1.7%), although rental overcrowding is less common.

Owner-occupied units average 2.73 persons with 2.29 for rental units. The distribution of persons per household by tenure appears in Table 6.7 below.

Average Size (Persons)	2.73	2.29

Source: U.S. Census Bureau: 2008-2010 American Community Survey.

Year Moved Into Current Residence

The median year that the DeKalb County householder moved into their housing unit was 2004, more recent than the nation at 2002. Owners recorded a median year of 2001 with renters later than 2005, based on the 2008-2010 American Community Survey. Table 6.8 arrays year moved into current residence.

The county appears relatively transient. Fewer than one-third (31.6%) of householders lived in DeKalb County before 2000.

Table 6.8

Age of Housing

The median year in which DeKalb County housing units were built was 1975, the same year as median housing age for the nation. For Illinois, housing is older with a median year built of 1965.

As seen in Table 6.9, approximately one in five housing units (20.1%) has been built since 2000. At the other end of the age spectrum, almost as many (18%) were constructed before 1940.

Home Sales and Value and Gross Rent

As shown in Table 6.11, recent years have also seen a rapid decline in home sales along with lower prices. Single family houses sold fell from a recent peak of 1,820 in 2006 to a low of 537 in 2010. The average price of DeKalb County homes sold declined by one-third (33.5%), from \$215,966 in 2006 to \$143,561 in 2011.

Condominium sales in DeKalb County also experienced similar drops. Sales fell from 368 in 2007 to 127 just two years later. Average condominium price was \$159,431 in 2006, but only \$105,411 in 2011.

A small rebound in home sales took place in 2011, although sale prices continued the decline.

Census data reveals the home value for all owner-occupied units as designated by the householder if the home were for sale. Despite the recent weakness in real estate values, the Census data (Table 6.12) reveals that owners perceived considerable appreciation since the 2000 Census. DeKalb County owners judged the median value of their home at \$189,700 for 2008-2010, up from \$135,900 in 2000. The current perceived value is similar to the U.S. median of \$187,500.

Housing Costs Related to Income

Housing costs as a percentage of income provides a measure of the “burden” of housing expenditures on the financial resources of the household. These proportions are shown separately for owners and renters in Table 6.14.

Renters are somewhat more likely to pay more of their income for housing than owners. Paying 35% or more of their income in 2008-2010 was half (50.8%) of renters compared to 28.5% of owners.

Availability of Phones and Vehicles

The availability of phones and vehicles is often used to indicate whether households enjoy certain basic resources. In 2008-2010, overall, 1.6% of DeKalb County households did not have access to a phone (including cell) and 5.9% did not have an available vehicle. Among householders aged 65 and older, one in eight (12.7%) did not have an available vehicle. Table 6.16 distributes telephone and vehicle availability by age groups.

Chapter 7
EDUCATION AND EMPLOYMENT

Educational Attainment

More than nine in ten (91.1%) DeKalb County adults aged 25 years and older are high school graduates. The current level is the first time that the county has passed the 90% level. In 1980, only three of four residents held a high school diploma. With 91% of residents having high school graduates, DeKalb County exceeds both Illinois (86.5%) and the U.S. (85.3%).

Bachelor's degrees have been obtained by 27.5% of residents aged 25+, while graduate degrees stand at 10.2%. Despite the high level of high school graduates and the presence of Northern Illinois University, the proportion with Bachelor's and graduate degrees are below the state and nation, as shown in Table 7.1. These figures appear to indicate some out-migration of persons with higher education.

Table 7.1

Source: U.S. Census Bureau: 2008-2010 American Community Survey.

Attainment levels show some contrasts when examined by racial/ethnic category (Table 7.3). Perhaps because a large proportion of the black population is associated with NIU, blacks lead attainment with 95.4% high school graduates and 39.8% college graduates, both higher than the white non-Hispanic group. Hispanic attainment trails other racial/ethnic categories. Only 68.8% of Hispanics aged 25+ have a high school diploma (although up from 54.1% in 2000) and just 7.9% have completed a Bachelor's degree. Current Asian figures are not available from the American Community Survey, but Asian residents in 2000 exhibited the highest attainment, especially for Bachelor's degrees, which stood at 62.5% in the 2000 Census.

High School Graduation Rates

For the school year 2010-2011, only three of eight DeKalb County school districts exceeded the state graduation rate of 87.8%. Graduation rate, as defined by the Illinois State Board of Education, measures “on time graduation, based on the number of students graduating from 12th grade as compared to the number enrolled in 9th grade four years earlier with adjustments for transfers in and out of the district.”

As Table 7.5 reveals, only Hinckley-Big Rock (96.7%), Somonauk (94.3%), and Genoa-Kingston (88.2%) exceeded the state graduation level in school year 2010-2011. Lowest was Sandwich, standing at 79.4%. In earlier years, most local school districts performed better than the state.

Employment Participation

Of DeKalb County residents aged 16+, men (75%) were more likely than women (65.2%) to be in the labor force, according to the 2008-2010 American Community Survey. The overall county participation rate of 70.1% is higher than Illinois (66.9%) and the U.S. (65.1%), as shown in Table 7.6. Women in the workforce, especially those with preschool children, escalated from 53.4% in 1980 to 63.6% in 2000. The 2008-2010 ACS recorded a slightly different measure, percent of children with all parents working. For 2008-2010, of children aged 0-5 in DeKalb County, 64.8% had all parents working. For children aged 6-17, all parents were working for 78.3%.

Occupation and Industry

Two occupational categories led the 2008-2010 DeKalb County workforce. These were management, professional and related occupations (32.6%) and sales and office occupations (26.4%). Occupational patterns are similar to the nation, as detailed in Table 7.7.

Educational, health and social services, which employ more than one in four workers (25.9%) constitutes the leading industry sector, slightly above the U.S. level of 22.6%. The next largest local industries are retail trade (13.9%), manufacturing (11.1%), and arts, recreation, accommodations, food (11.1%). Since 2000, manufacturing fell from 16.2% to 12.6%. Retail and arts/accommodations grew in the same period.

Unemployment

Unemployment in DeKalb County has typically run under national rates. The recent rate bottomed in 2007 at 3.9%, typical of the late 1990s. However, the rate rose to 9.8% in both 2009 and 2010 with nearly 6,000 persons locally lacking jobs. For 2011, some improvement took place as the rate fell to 9.2% (Table 7.8).

Source: Illinois Department of Employment Security

The Illinois Department of Employment Security has described the 2011 labor force by gender and race/ethnicity (Table 7.9). Of the 52,532 employed persons, 27,563 (52.5%) are male and 24,969 (47.5%) female.

Male 2011 unemployment stood at 8.7% compared to 9.7% for females. The black populace displays the highest rate of unemployment - 31.6%, even higher for black females (36.5%). The Hispanic unemployment rate stood at 12.5%, similar for both genders. Though blacks constitute only 5% of the labor force, they are 17.2% of the unemployed.

Further elaboration of the employment status of the 16-19 age group for 2008-2010 is shown in Table 7.11. Most (93.1%) individuals in this age group are enrolled in school although some (26.9%) are employed while attending school. Most of those not in school are high school graduates and most are employed. Of the estimated 74 individuals who are not high school graduates, the great majority - 57 or three of four (77%) are classified as unemployed.

Top Employers

The leading employer, by far, in DeKalb County is Northern Illinois University with 4,648 employees, according to the list compiled by the DeKalb County Economic Development Corporation (Table 7.12). Other educational entities among the top employers include the DeKalb School District (#3 with 871 employees), Sycamore School District (#6 with 515 employees) and Kishwaukee College (#7 with 500 employees).

KishHealth System is the second largest employer with 1,443 persons employed. Also serving the local area is DeKalb County Government, standing at #4 with 696 employees.

Distribution centers constitute the largest local private sector, including 3M (#5 with 596 employees) and Target, which stands at #8 (494 employees).

Retailers Wal-Mart Super Center (#9 with 475 employees) and HyVee grocery stores (#10, 360 employees) round out the top ten.

Top employers are dominated by organizations supported largely by taxation or local consumers.

Commuting

Over time, average commuting time for workers has extended from 15.7 minutes in 1980 to 26.1 minutes for 2008-2010. While the commuting time was well below the U.S. from 1980-2000, DeKalb County now exhibits a slightly longer commute than the nation.

Table 7.13
DEKALB COUNTY
COMMUTING TIME: 1980 - 2008-2010

Year	Mean Travel Time in Minutes	
	DeKalb County	U.S.

Table 7.15 elaborates on the geographic commuting pattern both into DeKalb County and by residents working outside of the county from 1990 through 2010. Over this thirty-year period, a major change took place in that more residents commute elsewhere and more workers living outside of the county work in DeKalb County.

Table 7.15

Source: U.S. Census Bureau Decennial Census for 1990 and 2000; compiled by DeKalb County Economic Development Corporation for 2010.

For DeKalb County residents in 2010, less than half (42.2%) worked within the county, down from 73.6% in 1990. Kane (17.4%), Cook (10%), and DuPage (7.8%) Counties are the major destinations for DeKalb County residents. External worker sources included the following counties: Kane (6.6%), Cook (6.2%) and Ogle (4%). Just over half (52.8%) of DeKalb County workers live in the county.

Education and Employment Characteristics for Cities of DeKalb and Sycamore

Education and employment characteristics for the cities of DeKalb and Sycamore are summarized in table 7.16. In terms of educational attainment, the two communities were similar, although in 2000 DeKalb had a much higher proportion of college graduates.

Table 7.16

INCOME AND POVERTY

Median Income

The 2008-2010 DeKalb County median household income (\$51,241) was very similar to the median for both the U.S. (\$51,222) and Illinois (\$52,972). Table 8.1 displays median household income for 1990, 2000, and 2008-2010. From the 2000 Census to 2008-2010, DeKalb County's median household income rose from \$45,828, a 11.8% increase, but lower than the state (13.7%) and U.S. (22%) increases. The county's median household income increase was far less from 2000 to 2008-2010 than was the case during the 1990s, which saw almost a doubling (+48.5%) in median household income.

Table 8.1
DEKALB COUNTY, ILLINOIS, AND U.S.

% Change 1990-2000	+48.5%	+44.5%	+39.7%

Source: U.S. Census Bureau: 1990 and 2000 from decennial Censuses, 2008-2010 American Community Survey.

As detailed in Table 8.2, county households headed by 45-54 year olds earned the most in 2008-2010, \$67,467. The county's youngest and oldest households reported the lowest median incomes. Households headed by persons aged 15-24 earned a median income of just \$17,647, while the median for those aged 65 and older stood at \$36,186. College students living in off campus homes and apartments may impact the low median for 15-24-year-old householders.

Median household income for all groups rose from the 2000 Census (1999 income) to 2008-2010, with the 25-44 year-old householders experiencing the largest increase.

Among ethnic groups (Table 8.2), the 2008-2010 median household income for white, non-Hispanics stood at \$54,325, which was 68.1% higher than the median for Hispanic households (\$32,322) and more than double the black median (\$22,061). Hispanic income fell during the period from \$35,018. Median household income for black households (whether Hispanic or not) increased by 31% during the decade.

Source: U.S. Census Bureau: 2000 from decennial Census; 2008-2010 from American Community Survey.

DeKalb County families, defined as two or more related persons living in a household, earn a median income (\$68,735), far higher than nonfamily households (\$27,491) which include a number of college students and elderly householders. The county's 2008-2010 per capita income was \$23,222, somewhat lower than state and national levels. Table 8.3 arrays 2008-2010 median income by household type. Median income for married-couple families, single female families, and nonfamilies are below Illinois and the nation. Median income for families is higher than Illinois and the nation. The DeKalb County median for married-couple families is more than double that for both single female families and nonfamily households.

Detailed Household, Family, and Nonfamily Income

Analysis of DeKalb County household types distributed by income categories (Table 8.4) shows that the largest proportion of both households (19.9%) and families (23.9%) earn in the \$50,000-\$74,999 range. One-fourth of area households and 12.3% of families earned less than \$25,000 in 2008-2010. At the other end of the income range, 18.2% of households earned more than \$100,000, compared to 27.6% of families.

Another income measure provided by the Census Bureau is “median earnings for full-time year-round workers” broken out by gender. According to the 2008-2010 American Community Survey, the DeKalb County earnings by gender were \$49,323 for full-time year-round male workers and \$35,852 for female workers.

Per Capita Personal Income

Per capita income is a broader measure of wealth than just earnings. In 2010, DeKalb County’s per capita personal income (PCPI) of \$30,725 ranked 87th of the 102 Illinois counties. DeKalb County’s PCPI was 26.9% lower than the state (\$42,040) and 23% lower than the U.S. level of \$39,937. However, although low, the 2010 PCPI reflected a 7.5% rise from 2009 and is the highest per capita in recent years for DeKalb County.

Per capita personal income is increasingly dependent on transfers (primarily government benefits) which grew from 10% in 2000 to 18% in 2010. Meanwhile, net earnings fell from 68% in 2000 to 65% in 2010.

Poverty

More DeKalb County residents live in poverty (16.3%) as a proportion of the population than the state (13.8%) and nation (14.4%), according to the 2008-2010 American Community Survey (Table 8.6). During the past decade, DeKalb County poverty increased, following state and national trends. DeKalb County's level rose from 11.4% in the 2000 Census, after dropping during the 1990s.

Table 8.6 also reveals that fewer local children aged 0-17 (14.8%) fall below the poverty level than the population as a whole, a pattern which is opposite Illinois and the nation. The county's poverty rate for children is well below both the state (19.4%) and U.S. (20.1%). However, since the 2000 Census (7.1%), the poverty rate for local children has doubled.

Poverty rates differ considerably for white non-Hispanics and Hispanics, as seen in Table 8.7. DeKalb County Hispanics (29.3%) recorded a 2008-2010 poverty rate two and a half times higher than the level for white non-Hispanics (11.7%). For both Illinois and the U.S., the Hispanic rate is about double that of white non-Hispanics. Black poverty (whether Hispanic or not)- 39.2% - is even higher than the Hispanic level and more than triple the white non-Hispanic rate.

Among household groups, female-headed families are most likely to be poor, particularly female-headed families with young children (Table 8.8). Almost three in ten (29.6%) female-headed families lives in poverty, reaching 86% of female-headed families with children aged 0-4. The lowest levels of poverty are experienced by senior citizens (4.7%) and families (8.5%). With the exception of both families with children 0-4 and single female household with young children, poverty for local groups is lower than state and national proportions. However, poverty levels for all groups increased since the 2000 Census.

To provide a more detailed view of poverty, Table 8.9 shows where persons stand in relation to poverty as a ratio of income. Almost one-third (32.3%) of DeKalb County residents live between poverty and 200% of poverty or twice the poverty level. The 2009 poverty threshold was \$21,756 for a family of four with two children and \$10,956 for a person living alone.

Income and Poverty Characteristics of DeKalb and Sycamore

As detailed in Table 8.10, the City of DeKalb's 2008-2010 median household income (\$36,829) was much lower than DeKalb County as a whole (\$51,241), most likely because of the large number of NIU students. The City of DeKalb's median family income stood at \$63,467, a bit lower than the \$68,735 for the county. The city's per capita income (\$18,488) was also less than the overall county per capita of \$23,222. Sycamore recorded both a fairly high median household income (\$66,359) and median family income (\$79,274). Sycamore's per capita income was also higher than the overall county per capita.

The poverty level for City of DeKalb residents (29.1%) is far higher than DeKalb County overall (16.3%) and almost five times the poverty level for Sycamore (6.7%). More than one in five (21.8%) of DeKalb children is living in poverty, compared to just 7.9% of Sycamore children and 14.8% for the county overall.

Sycamore	\$66,359	\$79,274	\$31,582	6.7%	7.9%

Source: U.S. Census Bureau, 2008-2010 American Community Survey.

Overall, these figures reveal higher income and less poverty in Sycamore as compared to DeKalb.

Medicaid Enrollment

In June 2011, the number of persons receiving Medicaid in DeKalb County stood at 15,735, a 243% increase from ten years earlier, and representing 14.5% of the county's population. Historically, since 1995, the number and proportion of Medicaid recipients generally has risen consistently, with 2011 being the highest level in recent years. Table 8.11 shows DeKalb County's Medicaid recipients from 1995-2011.

Table 8.11

Chapter 9
BIRTHS (NATALITY)

Births, Birth and Fertility Rates

DeKalb County reported 1,322 births in 2009, the largest number since 2006 and the second highest number of births since 1980. Since 1980, the number of births in DeKalb County has ranged from a low of 864 in 1984 to a high of 1,334 in 2006 (Table 9.1). The 1,322 births in 2009 represent a 3.7% increase from 2008, as well as a 18.2% rise since 2000, an increase similar to the population growth.

DeKalb County birth rates (births per 1,000 population) have consistently fallen below state and national birth rates, largely the result of the presence of a significant college-aged population who tend to be non-child bearing. The 2009 DeKalb County birth rate of 12.3 births per 1,000 population was lower than both the state (14.1) and U.S. (13.5).

Since 1995, with one exception, the county's birth rate has been in a small range between 12.1 and 12.9. The exception was in 2001, when the birth rate reached a thirty-year high of 13.4.

Although relatively low, the DeKalb County fertility rate, a more specific measure of birth activity, has risen somewhat from 1990 to 2009 (Table 9.2). DeKalb County fertility in 2009 stood at 51.3 births per 1,000 females ages 15-44 compared to 46.6 for 1990.

Table 9.2
DEKALB COUNTY, ILLINOIS, AND U.S.
FERTILITY RATES: 1990, 2000, AND 2009

	Births	Females Ages 15-44	Rate ¹		
2009	1,322	25,735	51.3	64.7	66.7
2000	1,118	23,553	47.5	67.4	65.9
1990	1,024	21,969	46.6	72.9	70.9

¹Fertility rate is number of births per 1,000 women of childbearing age defined as 15-44 years.

Source: Illinois Department of Public Health; National Center for Health Statistics.

Like the birth rate, DeKalb County's fertility level falls below both the Illinois and U.S. figures. The 2009 rate was 26.1% lower than the state (64.7) and 30% below the U.S. figure (66.7). While both Illinois and the U.S. witnessed a decline in fertility over the past two decades, DeKalb County's fertility rose by 10% during the period.

Births by Race/Ethnicity

Births in DeKalb County are predominantly white, though the proportions of black and Hispanic births have grown over the past three decades (Table 9.3). In 2009, 88.7% of DeKalb County births were white, while blacks constituted 8.7% of births, much more diverse than in 1980, when white births comprised 95.8% of all DeKalb County newborns and blacks made up just 3% of births.

Another natality change has been the growing proportion of births classified as Hispanic, an ethnic identity separate from race. 1995 saw almost a tripling of the proportion of Hispanic births, standing at 9.3% of all births. Since 1995, both the number and proportion of Hispanic births have continued to increase, reaching 225, or one in six, births (17%) in 2009. Asian births are not known for 2009. The last Asian data in 2006 showed 21 Asian and Pacific Islander births in DeKalb County.

¹Hispanic may be of any race. White, black and other are racial categories.
Source: Illinois Department of Public Health

For 2009, births are also available for combined race/ethnic categories as shown below in Table 9.4.

Table 9.4
DEKALB COUNTY
BIRTHS BY RACE AND ETHNICITY: 2009

Category	Number	Percent
Total Births	1,322	100.0%
White non-Hispanic	953	72.1%
Black non-Hispanic	110	8.3%
Other non-Hispanic	34	2.6%
Hispanic	225	17.0%

Source: Illinois Department of Public Health

Birth rates using 2010 populations were as follows: white non-Hispanic (11.4), black non-Hispanic (16.7), other non-Hispanic (8.3) and Hispanic (21.1).

Age of Mother

DeKalb County women giving birth are most likely to be in their twenties and early thirties as revealed in Table 9.5. In 2009, almost one-third (32.3%) of DeKalb County births were to women ages 25-29 years, while one-quarter (24.7%) were born to women ages 30-34 and another quarter (24.5%) to ages 20-24.

DeKalb County's median age of mother at 27.9 years (2009) is similar to the Illinois (28.5) and U.S. (27.9) figures.

DeKalb County women give birth at somewhat older ages now than was true in the past (Table 9.6). In 1980, the county's median age for mothers giving birth was 25.4 years, two and a half years younger than the 2009 median age of mother (27.9). In 1980, one of five births (19.3%) was to mothers 30 or older. The 2009 proportion was well over one-third (36.3%).

Fertility may also be examined using age-specific fertility rates (Table 9.7) for childbearing age groups. DeKalb County showed higher 2009 fertility than national rates for women aged 30-34 (103.4 vs. 97.7). Fertility rates among all other age groups were lower than U.S. levels. Fertility for women 15-19 and 20-24 was less than half the U.S. level, likely reflecting the large number of female college students.

Table 9.7
DEKALB COUNTY AND U.S.
AGE-SPECIFIC FERTILITY: 2009

Age Group	DeKalb County			U.S. Rate Per 1,000 Females
	Births	Female Population ¹	Rate Per 1,000 Females

Teen Births

As noted previously, the DeKalb County teen fertility rate of 18.5 births per 1,000 females aged 15-19 is less than half that of the nation (39.1). As detailed in Table 9.8, DeKalb County recorded 92 teen births in 2009. Proportionally, 7% of 2009 births were to teens, rising from 6.2% in 2008, which was the lowest proportion in 25 years. Teen births in the county have ranged from 2008's low of 6.2% to a high of 11.9% in 1980.

Historically, the county's teen birth proportion has generally fallen three or more percentage points below both the state and nation, another reflection of low fertility in the college population. The U.S. level in 2009 was 10%, with Illinois at 9.6%. Teen births nationally have been declining.

Most DeKalb County teen births are to mothers in the 18-19 age group, nearly three-fourths (73.9%) in 2009. No births were recorded for mothers under age 15. Table 9.9 details DeKalb County teen births by age group.

Table 9.9
DEKALB COUNTY
TEEN BIRTHS BY AGE GROUP: 2009

Age of Mother	Births	Percent of Teen Births
Less than 15	0	0.0%

Births to Unmarried Mothers

In 2009, over one-third (36.7%) of DeKalb County births were to unmarried mothers, a record high for the county and more than three times the 1980 proportion (9.7%). The county's proportion of births to unmarried women has consistently fallen below the state and national levels, though the local rate of increase has been greater so the gap with the state and nation is narrowing. Table 9.10 shows unmarried mothers for DeKalb County, Illinois and the U.S. from 1980 - 2009. DeKalb County 2006 birth information showed that 90% of teen births were to unmarried mothers.

By race/ethnicity, the unmarried proportions in 2009 were white non-Hispanic (20%), black non-Hispanic (76.4%), other non-Hispanic (26.5%) and Hispanic (56.9%).

Low Birth Weight

Low birth weight is a good indicator of infant health. In 2009, 84 DeKalb County births were of low weight (less than 2,500 grams or five and half pounds) accounting for 6.4% of all births, falling from 7% in 2008 (Table 9.11). This proportion was somewhat lower than Illinois at 8.4% and the U.S. at 8.2%. Since 1980, DeKalb County consistently has recorded a low birth weight proportion below both Illinois and the nation. During the past three decades, the county revealed a record high low birth weight level of 8% in 2006 and a low of 4.1% in 1980. Though the current proportion of 6.4% is favorable, the county recorded low birth weight levels less than 5% in many years prior to 1995.

National Center for Health Statistics.

Low birth weight percentages by race/ethnicity for 2009 were white non-Hispanic (7%), black non-Hispanic (4.5%), other non-Hispanic (14.7%) and Hispanic (3.1%).

Prenatal Care

Good birth outcomes depend, in part, on adequate prenatal care. Ideally, care should begin in the first three months of pregnancy referred to as the first trimester. In 2008, the most recent year available, almost nine in ten (86.1%) DeKalb County births received first trimester prenatal care, a small improvement from the 2007 level of 84% (Table 9.12) and the highest level since 1980. In 2006, 83.2% of local births received first trimester care, compared to 82.5% for Illinois.

Two indices consolidate several dimensions of prenatal care into a single measure. The Kessner Index uses trimester care begun, number of prenatal visits and gestational age of infant at time of delivery to categorize care as adequate, intermediate, or inadequate. The Kotelchuck Index of Prenatal Care Utilization combines initiation of prenatal care by two month intervals and number of visits once care has been initiated. Regarded as the more refined summary statistic, the Kotelchuck Index groups prenatal care into four levels: adequate plus (intensive), adequate, intermediate, and inadequate.

In 2009, 76.6% of DeKalb County births received adequate care according to the Kessner Index while a slightly higher percentage (80.1%) obtained adequate plus or adequate care based on Kotelchuck (Table 9.13).

Table 9.13

Tobacco and Alcohol Use During Pregnancy

Certain behaviors during pregnancy can put newborns at risk. Smoking is associated with an increased incidence of low weight birth and congenital anomalies. Alcohol contributes to poor fetal development, including fetal alcohol syndrome (FAS). Mothers self-report these behaviors on the infant's birth certificate so accuracy cannot be assessed.

For 2009 births, as seen in Table 9.14, one in eleven (9.2%) county births was delivered by women who had used tobacco while pregnant, higher than the 2008 state level at 7.9%. The county's level of tobacco use during pregnancy has fluctuated a bit over the past decade, but generally is lower than during the 1990s.

Far fewer DeKalb County women report using alcohol during pregnancy than smoking. Researchers widely believe that drinking alcohol during pregnancy is under-reported on the birth certificate. In 2009, just two (0.2%) mothers reported drinking alcohol during pregnancy.

Birth Characteristics by Race/Ethnicity

Some detailed birth characteristics by race/ethnicity were available for 2009, as shown in Table 9.15. Teen births to mothers aged 19 and younger were most common among Hispanic mothers, 11.6% compared to 7% for all births. The low birth weight proportion of 14.7% for black births was substantially above other groups. The percentage of unmarried black mothers (76.4%) was far higher than the white proportion of 20%, while the Hispanic percentage of 56.9% fell between the white and black levels.

Source: Illinois Department of Public Health

In 2006, first trimester care for white mothers (84.1%) was higher than for black (75%), Asian (69%) and Hispanic (68.7%) mothers.

Though based on only three 2006 infant deaths, the black infant death rate of 31.3 per 1,000 births was well above the total births level of 7.4.

Birth Defects

Table 9.16 arrays the incidence of various birth defects and other adverse outcomes in newborns for the period 2004-2008. During this period, 74 DeKalb County infants were born with cardiovascular defects, a rate of 116.7 per 10,000 births, compared to 112.9 for Illinois. The number of newborns with cardiovascular defects was followed by perinatal deaths, which stood at 68, for a rate of 107.3. The rate of genitourinary defects (69.4) locally was somewhat higher than for the state (60.3), while rates for central nervous defects, alimentary tract, musculoskeletal defect, chromosomal defect, serious congenital infection, and fetal alcohol syndrome fell below Illinois levels.

Delivery Method

Over one-third (34.1%) of DeKalb County 2008 births were delivered by Cesarean section, a bit higher than 30.6% for Illinois (Table 9.17). The proportion of vaginal deliveries stood at 64.8% in 2008, slightly below the state (67.5%). Just nine DeKalb County births were VBAC births in 2008. Cesarean data without detail is available for 2009, when 433 deliveries or 33.2% of all births were by C-section.

Medicaid Births

According to data obtained from the Strong Start program of the Illinois Department of Human Services for the combined five-year period 2005-2009, DeKalb County experienced 2,754 Medicaid births, accounting for 42.6% of all births. In 1993, Medicaid births constituted just 21% of all births, so that a doubling has taken place since 1993. The 2005-2009 data translates to an annual average of 551 Medicaid births in the county.

Premature Medicaid births, early deliveries before 37 weeks, totaled 283 constituting 10.3% of Medicaid births. Table 9.18 details Medicaid births for DeKalb County, the City of DeKalb, and Sycamore as shown by DHS 2005-2009 figures.

Table 9.18
DEKALB COUNTY, CITY OF DEKALB AND SYCAMORE
MEDICAID BIRTHS AND PREMATURE MEDICAID BIRTHS: 2005-2009

Percent Premature Medicaid Births	10.3%	10.0%	12.9%
Average Annual Premature Medicaid Births	57	26	10

¹Estimated.

Source: Illinois Department of Human Services Safe Start Program.

The City of DeKalb recorded 1,362 Medicaid births during the five-year period, while the number for Sycamore stood at 387. For DeKalb, 10% of these Medicaid births were premature, while Sycamore's premature level was 12.9%. Half of the county's Medicaid births were to City of DeKalb residents.

Induced Pregnancy Terminations (Abortions)

DeKalb County women recorded 270 abortions in 2009, the highest number since at least 1995 (Table 9.19). The county has experienced a rapid increase of abortions since 2005, when the number was 148. With 206.5 induced pregnancy terminations per 1,000 births, the 2009 county rate is the highest since 1996. During 2009, slightly over two abortions were performed for every ten delivered births. However, DeKalb County's 2009 rate is below the Illinois rate of 241.5, although the gap is much narrower than in most previous years.

Table 9.19

Source: Illinois Department of Public Health.

Abortions are recorded for the residence reported by the woman undergoing the procedure.

Infant Deaths

DeKalb County reported 11 infant deaths in 2009, a rate of 8.3 deaths per 1,000 live births, as noted in Table 9.20. 2009's infant death rate was higher than both the state (6.9) and U.S. (6.5). Until 2001, DeKalb County's rate was generally lower than Illinois and the nation. However, the county infant death rate has been higher than the state and U.S. for five of the last ten years. Because the numbers are small, infant mortality rates have been somewhat variable. They are, however, greatly improved from rates experienced during the 1980s.

Percent	42.9%	29.3%
First Trimester Care	468	238
Percent	80.6%	87.2%

Source: Illinois Department of Public Health.

In 2009, DeKalb residents had 581 births for a crude birth rate of 13.2, while Sycamore residents recorded 273 births with a crude birth rate of 15.6. Most minority births took place in DeKalb. Unmarried mothers were more common in DeKalb (42.9%) than Sycamore (29.3%).

Although births declined for the entire county from 2006 to 2009, births rose appreciably in Sycamore from 218 in 2006 to 273 in 2009 and in DeKalb from 540 to 581. Thus, births are becoming more concentrated in the DeKalb-Sycamore area, as the county lost 108 births overall.

Chapter 10
DEATHS (MORTALITY)

Deaths and Death Rates

Mortality data is reported from CDC WONDER, which details death by cause through 2009. The Illinois Department of Public Health provides total deaths through 2008, with very limited detailed breakouts.

DeKalb County recorded 675 deaths in 2009 yielding a crude death rate of 6.3 deaths per 1,000 population (Table 10.1). Nursing homes (36.5%) were the leading place of death, followed by hospitals (27.6%) and home (24.7%).

The crude death rate has been somewhat variable over the past decades with a range from a high of 7.4 in 1984 to a low of 5.9 in both 2007 and 2008.

DeKalb County crude death rates have consistently fallen below state and national levels. For 2009, DeKalb County's 6.3 was well under Illinois and the U.S., both at 7.9.

When the effects of the population's age structure are eliminated through the use of age-adjusted rates, the DeKalb County age-adjusted rate is slightly lower than the state (7.6) and nation (7.5) with an age-adjusted rate of 7.4. Age adjustment makes the populations similar to the standard U.S. 2000 population. Table 10.2 displays the age-adjusted death rates for 2007-2009 combined.

Table 10.2
DEKALB COUNTY, ILLINOIS, AND U.S.
AGE-ADJUSTED DEATH RATE¹: 2007-2009

Area	Crude Rate	Age-Adjusted Rate
DeKalb County	6.1	7.4
Illinois	7.9	7.6
U.S.	8.0	7.5

¹Adjusted to U.S. standard population 2000. Rates per 1,000 population.

Source: Centers for Disease Control and Prevention.

Comparisons are made on a three-year (2007-2009) basis throughout this chapter to smooth out variations which may occur for a single year.

Race/Ethnic Deaths

Minority deaths are relatively few owing to the young age structure of these groups and the relatively small size of these populations in DeKalb County. For 2007-2009, black deaths totaled 32, yielding a crude death rate of 156.7 per 100,000 population and an age-adjusted rate of 793.3.

Hispanic deaths for 2007-2009 also numbered 32 for a crude death rate of 105.6 and an age-adjusted rate of 364.8.

Asian deaths during the three-year period were less than ten, so that rates are not available from CDC in accordance not to show small numbers less than ten.

Table 10.1

Deaths by Age Group

In Table 10.3, deaths and crude death rates per 1,000 population are shown for 2007-2009 by age group for DeKalb County and the U.S. Age-adjustment is not necessary because deaths are already for a specified age cohort. During 2007-2009, DeKalb County rates were below the nation for most age groups. The only exceptions were infant deaths (less than one year old) and the elderly aged 75+. In the 2007 Community Analysis, a similar pattern was found for 2004 data.

Table 10.3
DEKALB COUNTY AND U.S.
NUMBER AND CRUDE DEATH RATES BY AGE GROUP: 2007-2009

Deaths by Cause

Of special interest are deaths analyzed by cause for 2007-2009 using the "113 cause list" in ICD-10 from CDC WONDER. Federal data from the National Center for Health Statistics is far more current and detailed than available from the Illinois Department of Public Health. Again, a three-year period is utilized for smoothing and comparison to the nation. In Table 10.4, rates are shown on an age-adjusted basis to exclude the differences in age structure.

Heart disease and cancer together account for almost half (45.1%) of all deaths with 441 heart disease and 426 cancer deaths for 2007-2009. Causes number three through six in frequency were stroke (111), accidents (109), Alzheimer's (99) and chronic lower respiratory disease (CLRD) (88). Alzheimer's was formerly found within dementia and CLRD formerly was part of COPD. Rounding out the top ten for DeKalb County 2007-2009 mortality were diabetes (65), nephritis (40), Parkinson's Disease (35), and suicide (28).

¹Rate per 100,000 population age-adjusted.

²Previously known as Chronic Obstructive Pulmonary Disease (COPD).

Source: Centers for Disease Control and Prevention: CDC WONDER.

When compared to the nation, the DeKalb County age-adjusted death rate for heart disease is much lower (168.9) than the nation (185.8). The county is also substantially under the U.S. death rate for chronic lower respiratory disease, cancer, and influenza/pneumonia.

Substantially above the nation are the DeKalb County rates for Alzheimer's, Parkinson's, diabetes, and stroke. In some cases, the elevated rates may result from better identification or coding. Proportionally, DeKalb County Parkinson's Disease mortality is more than double the U.S. rate. On the other hand, suicide is 41% under the U.S. rate.

Overall, cancer for DeKalb County (168.8) is below the nation (185.8). In terms of cancer sites, lung cancer is the clear leader, although the age-adjusted rate for DeKalb County is substantially under the nation. Colorectal, the second most common cancer site, on the other hand, is one-fourth higher than the U.S.

Motor vehicles dominate the accidental death causes and the age-adjusted local motor vehicle accident death rate exceeds the U.S. level by one-third. However, poisoning and falls are less likely to cause death locally than is true for the nation.

Cause of Death by Gender

Age-adjusted death rates for 2007-2009 are shown by gender for major causes in Table 10.5. Although many more DeKalb County women died than men, the male age-adjusted rate for all causes is 851.6 per 100,000 population, nearly one-third higher than the female rate of 648.0.

Cancer (195.0) is 27.9% higher for men when compared to women (152.4). Additionally, heart disease is higher for men (148.3) than women (135.4). Men also exhibit higher rates for most other causes with the largest gaps apparent for accidents and suicide. For suicide in the 2007-2009 period, six male suicides took place for every one female suicide.

About two male deaths took place in the three-year period 2007-2009 for every female death due to chronic liver disease and Parkinson's Disease. Men are also far more likely than women to die of bladder cancer.

By cancer site, lung cancer is the most common site for both genders. The leading male cancer site deaths are lung, colorectal and prostate, while the leading female cancer deaths are lung, breast, and colorectal.

Leading Death Causes by Age Group

Leading causes of death vary by age group (Table 10.6). Perinatal conditions accounted for nearly half (42.9%) of all deaths among 0-14-year-olds in 2007-2009. Accidents claim almost half (43.2%) of all deaths in the 15-44 age group, followed by suicide (12.6%) and cancer (11.7%).

For DeKalb County middle-aged residents aged 45-64, cancer was the number one killer, accounting for one-third (34.7%) of all deaths, followed by heart disease (21.8%) and accidents (9.9%).

Cancer (37%) also produced the most deaths among the "young elderly," persons aged 65-74, followed by heart disease at 21.1% and CLRD (7.5%).

For persons 75 and older, heart disease was the leading cause, accounting for one-fourth (25.6%) of deaths. Next among mortality causes for this age group were cancer (17.3%), Alzheimer's (7.7%) and stroke (7.4%).

Death Cause Trends

Table 10.7 shows death frequency by cause across three-year periods, specifically 2007-2009, 2004-2006, 2001-2003, and 1998-2000. During the entire period, population grew by nearly 20%, although deaths were up by only 7.1%

Over the entire period, the greatest numerical growth took place in accidents and Alzheimer's. Accidental deaths totaled 65 in 1998-2000, reaching 109 in 2007-2009. Alzheimer's deaths were not available in the earlier period, but grew from 65 in 2001-2003 to 99 in 2007-2009.

A sizeable improvement took place in heart disease deaths, falling 10.7% from 494 deaths in 1998-2000 to 441 in 2007-2009, even as the population was growing appreciably. Cancer (-9.1%) and influenza/pneumonia (-47.9%) also fell. Breast cancer deaths appear to be declining. A major increase, however, appears to have taken place for Parkinson's Disease.

Changes in the treatment of death causes from ICD-9 (used through 1998) to ICD-10 (1999-2009) may impact the presence of some causes. The greatest change related to the classification change was in the increase of Alzheimer's. In addition, Alzheimer's received added recognition within society.

Life Expectancy

Life expectancy is the average number of years remaining for a person or population at a given age. The Institute for Health Metrics and Evaluation (IHME) at the University of Washington has calculated life expectancy at birth for all U.S. counties from 1989-2009.

For the most recent figures available - 2009 - the life expectancy for DeKalb County is 77.5 for men and 81.3 for women, a difference of nearly four years. DeKalb County life expectancy is exactly the same as the U.S. level for women, but the DeKalb County male life expectancy is 1.3 years better than the nation. Table 10.8 reveals life expectancy by gender for DeKalb County and the nation for 2000 and 2009.

Table 10.8
DEKALB COUNTY AND U.S.
LIFE EXPECTANCY: 2000 AND 2009

Year	DeKalb County		United States	
	Male	Female	Male	Female
2009	77.5	81.3	76.2	81.3
2000	75.7	80.2	74.3	79.7

Source: University of Washington
Institute for Health Metrics and
Evaluation.

Since 2000, DeKalb County life expectancy has improved 1.8 years for men and 0.9 years for women. The 2000 female life expectancy of 80.2 was better than the nation by 0.5 years, though the levels became similar by 2009.

Premature Mortality

Of the 1,922 deaths which took place during the 2007-2009 period, 440 or 22.9% involved individuals under age 65, somewhat better than the U.S. at 27.5% (Table 10.9). For minority groups, though based on small numbers, the proportions dying prior to age 65 is far higher, five of every eight (62.5%) Hispanic deaths and more than half (53.1%) of black deaths.

Table 10.9
DEKALB COUNTY
DEATHS BEFORE AGE 65 BY RACE/ETHNICITY: 2007-2009

Race/Ethnicity	Total Deaths	Before 65	Percent Before 65
All Persons	1,922	440	22.9%
White	1,879	415	22.1%
Nonwhite	43	15	34.8%
Black	32	17	53.1%
Hispanic	32	20	62.5%

Source: Centers for Disease Control and Prevention: CDC WONDER.

Premature mortality, defined as deaths before age 65, is shown by cause for 2007-2009 in Table 10.10. Suicide is most apt to be an early death in that 78.6% of 2007-2009 suicides were before age 65. Accidental deaths involve persons under age 65 nearly three-fourths (74.3%) of the time.

Another measure of premature death looks at the number of years of life lost prior to age 65 by comparing the age at death to expected longevity defined, in this case, as age 65. Such calculations are not available from CDC WONDER. Rather, figures derived by IDPH for DeKalb County 2006 deaths, the last available year, are shown in Table 10.11. This information places accidents at the top of the “years lost” list, followed by cancer, perinatal conditions, suicide and heart disease.

Table 10.11

Premature Mortality - County Health Rankings

County Health Rankings are published annually by the University of Wisconsin's Population Health Institute and the Robert Wood Johnson Foundation. The rankings measure how healthy people are, along with how long they live, plus health behavior, clinical care, social and economic factors, as well as the physical environment. Counties are compared to other counties in their state.

Mortality in the 2012 rankings was measured by years of potential life lost (YPLL) before age 75 per 100,000 population for 2006-2008. DeKalb County did relatively well with 5,504 YPLL compared to 6,728 for the entire state. DeKalb County placed tenth best among the 102 Illinois counties, with DuPage placing first at 4,293 YPLL.

DeKalb and Sycamore Deaths

The latest mortality data for larger communities reveals that in 2006, according to IDPH, the number of deaths in the City of DeKalb was 237 for an estimated crude death rate of 565.3 per 100,000 population. Sycamore deaths stood at 110 for a crude rate of 718.1. Age-adjusted rates would be more meaningful.

Chapter 11
HEALTH STATUS AND BEHAVIORS

Perception of Health

More than half (54.5%) of DeKalb County adults consider themselves to be in very good or excellent health according to the latest results of the Behavioral Risk Factor Surveillance Survey (Table 11.1). While this level is similar to the state at 55.1%, the 2009 figure represents a decline from the county's 2004 figure of 57.9%. Just under one in twenty DeKalb County adults (4.5%) rated their health as poor in 2009, a higher proportion than reported in earlier surveys.

Conducted by the Illinois Department of Public Health, the Behavioral Risk Factor Surveillance Survey (BRFSS) collects information about perceptions, behaviors, health care utilization and prevalence of certain conditions and diseases. Covering each of the state's 102 counties, this telephone survey of about 400 households has been conducted in DeKalb County for four rounds, 1997, 2001, 2004, and 2009.

Table 11.1
DEKALB COUNTY AND ILLINOIS
PERCEPTION OF HEALTH STATUS: 1997 - 2009

Response	Percent of Population 18+				
	DeKalb County ¹				Illinois 2009
	2009	2004	2002	1997

1-7 Days	NA	27.2%	26.7%	23.0%	25.2%
8-30 Days	NA	2.5%	10.4%	6.7%	15.0%

¹Telephone survey of 400 households for DeKalb County.
Source: Illinois Department of Public Health, Behavioral Risk Factor Survey.

The majority (60.8%) of DeKalb County adults enjoyed good mental health during all days of the past month in 2009, similar to the state level. However, this level dropped from the 2004 figure of 63.1%. At the other end of the spectrum, 16.9% of DeKalb adults said they experienced poor mental health for more than one week of the past month, an increase over the 10.2% reported in 2004 and the highest proportion in all of the survey administrations.

The perception of physical health did not fare any better. In 2009, 58.9% of DeKalb County adults perceived their physical health to be good all days of the past month while 17.4% said their physical health was poor for more than seven of the past 30 days. This compares to the state's 13.7% saying poor health extended more than seven of the past 30 days. In DeKalb County, the 2009 levels of physical health are worse than 2004 figures and much worse than 1997.

Prevalence of Chronic Conditions

Analyzing the magnitude of chronic conditions becomes an important dimension of a community's health profile since these conditions affect the daily capabilities and overall well being of a significant proportion of the population.

In the BRFSS respondents indicate the presence of conditions diagnosed by a health professional. Based on these self-reported results (Table 11.2), over one-fourth of DeKalb County adults have high cholesterol (27.3%) or high blood pressure (25.9%). The proportions for both of these conditions are lower than state levels, especially high cholesterol, which has an Illinois rate of 37.3%. The results also indicate that 18.2% of DeKalb County adults suffer from arthritis while a similar proportion (18.5%) live with asthma. Diabetes afflicts 4.4% of the county's population 18 years and older, much lower than the Illinois rate of 8.2%. BRFSS results are not age-adjusted. At 65+ county prevalence is much higher - arthritis (56.1%), high blood pressure (55.9%), high cholesterol (45.6%) and diabetes (18.9%).

Table 11.2
DEKALB COUNTY AND ILLINOIS
PREVALENCE OF SELECTED CONDITIONS¹: 2009

Condition	Percent of Population 18+	
	DeKalb County	Illinois
Arthritis ²	18.2%	26.3%
Asthma	18.5%	13.3%
Diabetes	4.4%	8.2%
High Blood Pressure ²	25.9%	29.0%
High Cholesterol ²	27.3%	37.3%

¹Self reported existence of conditions which were diagnosed by respondent's health professional.

Source: Illinois Department of Public Health BRFSS.

The presence of chronic conditions may also be estimated by applying national prevalence rates to the local population (Table 11.3). Using this approach, lower back pain and chronic joint symptoms top the list of chronic conditions, each having more than 20,000 individuals with one of these conditions. Hypertension (18,111), arthritis (15,670), and migraines (14,109) are next highest in prevalence.

When examined by age group, DeKalb County residents aged 18-44 are most likely to suffer from lower back pain, migraines, and chronic joint symptoms, while middle-aged adults aged 45-64 most commonly have chronic joint symptoms, lower back pain, and arthritis. Hypertension, arthritis, and chronic joint symptoms occur at higher levels than other chronic conditions among the county's elderly, both those 65-74 and 75+.

Health Behaviors

Almost two-thirds (64.4%) of DeKalb county adults are overweight or obese based on body mass index (BMI) calculated from height and weight, a level above the state at 61.5% (Table 11.4). The proportion of obese individuals has risen substantially since 2001, when the proportion stood at 18.8%.

More than one in five DeKalb County adults are at risk for binge drinking based on their alcohol consumption, the lowest level since 1997, but well above the Illinois rate of 18.3%. The proportion of DeKalb County adults who currently smoke is 29.5%, much higher than previous rates and 75% higher than the 16.9% for the state. One in five (20.5%) DeKalb County adults indicated they used to smoke and half claim to be non-smokers.

Table 11.4
DEKALB COUNTY AND ILLINOIS
SELECTED HEALTH BEHAVIORS: 1997 - 2009

Source: Illinois Department of Public Health, Behavioral Risk Factor Survey.

Cancer Screening Use

Mammography, an x-ray of the breast, is a recommended screening procedure for breast cancer and breast abnormalities. Showing levels lower than the state, 86.2% of all DeKalb County women aged 40 years and older have had a mammography exam, with 56.2% reporting their most recent mammogram within the past year (Table 11.5). Rates of pap smears among DeKalb County women are very high, standing at 98.3%, compared to 92.6% for Illinois.

Two tests are commonly conducted to detect prostate problems among men. One, a prostate-specific antigen (PSA) test, is a blood test used to determine the presence of prostate cancer. Local data for 2009 is not available; however, in 2004 almost two-thirds (63.9%) of men aged 40 years or older had obtained a PSA test. A greater proportion (82.3%) have had the other test, a digital rectal exam. The 2004 screening levels of both these tests were higher for DeKalb County men than for the state in 2009.

Two medical tests used to screen for colorectal cancer and abnormalities show moderately high levels of use among DeKalb County adults. Among the population 50 years and older in 2009, 65.3% have received a colonoscopy or sigmoidoscopy, rising from 49.4% in 2004, while 51.7% have completed a blood stool test. These rates are both higher than state figures.

Table 11.5
DEKALB COUNTY AND ILLINOIS
UTILIZATION OF CANCER SCREENING PROCEDURES: 2004 AND 2009

Procedure	Percent of Population		
	DeKalb County		Illinois 2009
	2009	2004	
Women			
Had a mammogram, ages 40+	86.2%	88.1%	92.1%
Within past year	56.2%	89.0%	56.4%
Had a Pap Smear, ages 18+	98.3%	90.5%	92.6%
Within the Past Year	74.6%	85.8%	73.8%
Men, ages 40+			
Had PSA Test	NA	63.9%	62.8%
Had Digital Rectal Exam	NA	82.3%	73.8%
All Adults, ages 50+			
Had Colon/Sigmoidoscopy	65.4%	49.4%	61.7%
Had Blood Stool Test	51.7%	58.7%	34.0%

Cancer Incidence

For the five-year period 2004-2008, DeKalb County's average annual age-adjusted cancer incidence rate of 479.4 cases per 100,000 population was a bit lower than the state's 490.4 (Table 11.6). Similar to the statewide picture, cancer occurs more often in DeKalb County men (a rate of 547.9) than women (438.7).

Table 11.6
DEKALB COUNTY AND ILLINOIS
AVERAGE ANNUAL CANCER INCIDENCE ALL SITES: 2004-2008

Area	Age-Adjusted Rate Per 100,000 Population		
	Total	Gender	
		Male	Female
DeKalb County	479.4	547.9	438.7
Illinois	490.4	577.0	433.8

Source: Illinois Department of Public Health, *Illinois County Cancer Statistics Review Incidence, 2004 - 2008*.

Table 11.7 details cancer incidence by gender and site for 2004-2008. The leading cancer sites for men are prostate, lung, and colon/rectum. For women, breast, colon/rectum, and lung are the leading incidence sites. Aside from gender specific sites, men reveal higher rates of incidence for all cancer sites except bones/joints. This is especially true for lung/bronchus (77.7 for men vs. 49.2 for women) and urinary bladder (54.9 vs. 11.4).

Communicable Diseases (non-STD)

As seen in Table 11.9, in 2011, hepatitis led all other reportable communicable diseases with the three forms of hepatitis, A, B and C, accounting for 15 cases (13 cases of hepatitis C and two cases of hepatitis B), followed by salmonella with 13 cases and giardiasis with 11 cases. While the three forms of hepatitis represented DeKalb County's most frequently reported communicable disease in 2011, the occurrence of hepatitis in residents has decreased somewhat from 2000 when 23 cases were reported. The number of 2011 reported giardiasis cases almost tripled from 2010's figure of 4.

Sexually Transmitted Diseases

Sexually transmitted diseases (STDs) comprise a major group of infectious diseases with required reporting of three forms: syphilis, chlamydia and gonorrhea. DeKalb County has witnessed an upward chlamydia rate trend since the early 1990s, hitting a fifteen-year high in 2006 (519.3 cases per 100,000 population). The 2009 level of 406 cases for a rate of 456.3 is more than double the 1994 rate of 204.0, although declining since 2006. Consistently, the county's rates have exceeded the state-except-Chicago rates and, in some years, have also been above the total state rates.

DeKalb County reported a gonorrhea rate of 79.8 in 2009, about half the Illinois rate of 160.7 and lower than the state-except-Chicago rate of 94.0. For all of the past 20 years, the county's gonorrhea rate has fallen below the total state and state-except-Chicago rates, usually by a wide margin.

In recent years, syphilis has become a relatively infrequent disease, although 2009 saw an increase in early syphilis from just one case or none since 2002 to four cases in 2009. Primary and secondary syphilis followed the same pattern.

AIDS and HIV

Acquired immunodeficiency syndrome (AIDS), once feared for its anticipated rapid spread and high fatality rate has, through extensive screening and effective medications, become more manageable, yet is still not a curable disease.

In DeKalb County, four AIDS cases were reported in 2011 for a cumulative total of 16 cases since January 2005, a rate of 2.1 per 100,000 population (Table 11.12). The rate of AIDS cases is well below the Illinois rate of 8.6.

Human immunodeficiency virus (HIV) disease had six reported cases in 2011, with a total of 33 cases reported since January 1, 2005. This translates to a rate of 4.4 per 100,000 population, much lower than the state's 14.7.

Table 11.12

Childhood Blood Lead Levels

As detailed in Table 11.13, of the 1,248 DeKalb County children tested in 2010 for elevated blood lead levels, 4 or 0,3% showed blood lead levels of 15 or more micrograms per deciliter (mcg/dL). Elevated blood lead levels in children are associated with mental impairment, hearing loss and growth deficits. Each year since 2004, the proportion of tested children with blood lead levels of 15+ mcg/dL has been below one percent. Historically, the highest proportion occurred in 2001, standing at 4.6%.

Table 11.13
DEKALB COUNTY
CHILDHOOD BLOOD LEAD LEVELS: 1993 - 2010

Year	Number Tested	Levels (mcg/dL)				15+ mcg/dL	
		10 - 14	15 - 19	20 - 44	45+	Number	Percent

2002	434	17	3	1	0	4	0.9%
2001	436	14	10	10	0	20	4.6%
2000	374	17	7	2	0	9	2.4%
1999	378	21	5	4	0	9	2.4%
1998	371	28	8	8	0	16	4.3%
1997	382	38	11	2	1	14	3.7%
1996	539	---	10	6	0	16	3.0%
1995	446	---	3	3	0	6	1.3%
1994	321	---	3	6	0	9	2.8%
1993	243	---	3	2	0	5	2.1%

Note: Blood lead levels are measured in micrograms per deciliter (mcg/dL). Elevated levels are defined as ≥ 10 mcg/dL and are required by state law to be reported to the Illinois Department of Public Health. Prior to 1997, levels at 15+ mcg/dL were required to be reported to IDPH.

Source: Illinois Department of Public Health

Childhood Immunization

Six in ten (60%) DeKalb County three-year olds had received the recommended doses of diphtheria, tetanus & pertussis (DTP), polio, and measles, mumps, & rubella (MMR), according to a IDPH Clinic Assessment Survey conducted in 2005. The county's immunization rate exceeded Illinois. The Clinic Assessment Survey has not been updated so that 2005 is the most recent available data.

Table 11.14
DEKALB COUNTY AND ILLINOIS
IMMUNIZATION RATES AMONG THREE-YEAR OLDS: 2005

Series ¹	Percent Immunized ²	
	DeKalb County	Illinois
DTP, Polio, MMR (4:3:1)	60.0%	54.4%
DTP, Polio, Hib, MMR (4:3:3:1)	60.0%	53.4%
DTP, Polio, Hib, MMR, Hep B (4:3:3:1:3)	58.0%	53.4%

¹Series are as follows:

- 4:3:1 = 4 doses of diphtheria, tetanus, and pertussis (DTP), 3 doses of polio (IPV), 1 dose of measles, mumps and rubella (MMR).
- 4:3:3:1 = Includes all above plus 3 doses of Haemophilus influenza type b (Hib).
- 4:3:3:1:3 = Includes all above plus 3 doses of hepatitis B (Hep B).

²Based on a sample of 661 children ages 24-35 months seen in DeKalb County Health Department public health clinic.

Special Education Enrollment

On December 1, 2010, a total of 2,223 DeKalb County students were receiving special education services. Of these, 306 (13.8%) were ages 3-5, while 1,917 (86.2%) were ages 6-21. Table 11.15 details the exceptional characteristics of students enrolled in special education throughout DeKalb County.

The largest categories of student exceptional characteristics is specific learning disability (32.7%) and speech/language impairment (20.2%). Other health impairment (14.9%), developmental delay (8.8%) and emotional disability (8%) round out the top five characteristics. Students could possibly have more than one exceptional characteristic.

Mental Disorders

As defined by the Illinois Mental Health code, mental disorder is a general term applied to conditions which reflect disturbances in psychological functions. These may result in a variety of behavioral symptoms, ranging in duration from acute, crisis-like episodes to long-term chronic conditions. Levels of disability range from minimal to severely impaired and may fluctuate. Mental health status is relative to the presence or absence of mental disorders.

As arrayed in Table 11.16, within the past year, at least 12,580 DeKalb County residents aged 18-54 can be estimated to have been affected by a mental disorder using rates found in the 1999 *Mental Health: A Report of the Surgeon General*, as applied to the estimated 2011 age structure of DeKalb County. The leading mental disorders are any anxiety disorder (16.4%) and any mood disorder (7.1%).

An estimated 4,340 DeKalb County residents aged 55 and older have a mental disorder. Rates are slightly lower for this age group than for those aged 18-54, with the exception of cognitive impairment, which affects 6.6% of this age group.

In general, in a given year, 19% of the population have a mental disorder alone, 3% have both mental and addictive disorders, with 6% having just addictive disorders.

The annual prevalence of mental disorders in children and adolescents is not yet well documented for ages 9-17, but the levels are thought to be similar to adults.

Estimated Illicit Drug Use and Substance Abuse Treatment Need

When people become addicted to chemical substances, these drugs come to affect their lives in ways that they may have not anticipated, causing both personal, family, and societal disruption.

Conducted by the federal government since 1971, the National Household Survey on Drug Use (formerly called the National Household Survey on Drug Abuse) measures the prevalence of the use of illicit drugs, prescription drugs used nonmedically in the U.S. civilian, noninstitutionalized population 12 years old or older. The survey uses a random sample with voluntary, in-depth personal interviews. Self-reports depend on the memory and honesty of sampled respondents, but are considered to be accurate.

Table 11.17 displays the estimated prevalence of use by illicit drug in the past month (current users) based on national rates. Some estimates are based on very small samples so that substantial error is possible. The number of persons aged 12 and older currently using illicit drugs based on 2010 population in DeKalb County is estimated to be about 7,948. Marijuana is the primary illegal substance used, an estimated 6,162 persons. Illicit drug use declines with age. By age group, 7,705 youth aged 12-17 are estimated to currently use an illegal drug, with 5,101 persons aged 18-25, and 3,824 aged 26 and older.

Based on the national estimates, 6,634 whites, 563 blacks, and 636 Hispanics currently use an illegal drug. By gender, the number for DeKalb County males stands at 5,972, while 3,685 women currently use an illicit drug.

Also, in 2011, based on the Illinois Department of Human Services, Division of Alcoholism and Substance Abuse's 2003 report, *Alcohol, Tobacco, and Other Drug Use in Illinois: Prevalence and Treatment Need*, an estimated 13,155 (15.6%) DeKalb County residents aged 16 and older were in need of alcohol treatment, as well as 2,024 persons in need of drug abuse treatment.

Alcohol Involvement in Fatal Accidents

The Illinois Department of Transportation maintains a data system for recording fatalities involving a driver with a positive blood alcohol level. Information may not be available for all crashes. Table 11.18 presents fatal crash and blood alcohol content (BAC) statistics for DeKalb County from 2005-2010.

During 2010, DeKalb County recorded seven traffic crash fatalities. One of the seven traffic crash fatalities (14.3%) involved alcohol impaired driving (blood alcohol content of .08 or higher), somewhat lower than 21.4% seen five years earlier.

DUI Arrests

During 2010, Driving Under the Influence (DUI) arrests in DeKalb County totaled 585, for a rate of 694.9 DUI arrests per 100,000 DeKalb County residents aged 16 and older (Table 11.19), higher than the Illinois rate of 416.0. However, two years earlier in 2008, the local DUI arrest rate stood at an even higher 800.6.

Chapter 12
HEALTH RESOURCES AND UTILIZATION

Health Insurance and Health Care Use

Several sources provide information on health insurance and health care use in DeKalb County. The Behavioral Risk Factor Survey (BRFS) has provided snapshots at regular intervals, as shown in Table 12.1. Questions posed vary across the four rounds of the BRFS.

Table 12.1
DEKALB COUNTY AND ILLINOIS
HEALTH CARE UTILIZATION MEASURES: 1997, 2002, 2004 AND 2009

Indicator	Percent of Population 18+				
	DeKalb County				2009 Illinois
	2009	2004	2002	1997	
Have a Health Plan/Health Coverage	89.3%	86.2%	86.8%	89.9%	85.4%
Have a Usual Health Care Provider	78.9%	78.2%	70.2%	NA	84.4% ¹

Could Not Afford Dentist in Past Year	25.3%	14.9%	NA	NA	13.5% ²
Have Dental Insurance	71.6%	64.3%	69.7%	NA	61.9% ²

¹2010 data.

²2006 data.

³2008 data.

Source: Illinois Department of Public Health, Behavioral Risk Factor Survey.

According to the 2009 BRFS, nearly nine in ten (89.3%) DeKalb County adult residents have a health plan which covers them. Coverage has ranged from 86.2% in 2004 to 89.9% in 1997. The current 89.3% level exceeds the state proportion of 85.4%

Additional BRFS questions also relate to medical and dental care. Only 78.9% of residents have a "usual health care provider" considerably below the state level of 84.4% in 2010. One of six residents (16.1%) have avoided the doctor in the past year due to cost, up from 7.4% in 2002 and higher than the 2008 state level of 12.4%. An additional 18.2% avoided getting medications due to cost, twice the state rate of 9.2%.

Similar 2008 data for dental insurance reveals that the proportion of the adult population with dental insurance stands at 71.6%, compared to 61.9% for the state (2006). However, about one-fourth of DeKalb County residents reported not being able to afford a dentist in the past year, up from 14.9% in 2004, and considerably higher than the 2006 state rate of 13.5%.

Another source of information for health insurance comes from the American Community Survey (ACS) of the Census Bureau for 2008-2010. The ACS results for health coverage (89.8%) are virtually identical to the Illinois BRFS, but the ACS provides greater detail than the state survey. Public coverage, primarily Medicare and Medicaid, is shown at 21.1% and 10.2% are estimated to be uninsured. DeKalb County appears to have more insured and fewer uninsured than the nation, with somewhat less dependence on public programs.

Table 12.2
DEKALB COUNTY
HEALTH INSURANCE COVERAGE: 2008-2010

Health Insurance Coverage	DeKalb County		U.S. Percent
	Number	Percent	
Total Population	103,890	100.0%	100.0%
With Health Insurance	93,920	89.8%	85.0%
Private	80,391	77.4%	67.7%
Public	21,953	21.1%	28.5%
No Health Insurance	10,600	10.2%	15.0%
Children Under 18	23,440	100.0%	100.0%
No Health Insurance	848	3.6%	8.7%

Source: U.S. Census Bureau, American Community Survey.

A breakdown of coverage type by age group provides additional information as shown in Table 12.3. The ACS age data reveals that persons under age 18 are most likely to rely on public coverage, at 26.4% or about one-fourth of children.

Seniors aged 65+ tend to have both Medicare and a private supplement. While three-fourths (76.2%) are covered in this way, one of five (20.9%) elderly rely only on Medicare without a supplement.

The 2008-2010 ACS elaborates further on the characteristics of the DeKalb County uninsured. Nearly half (45%) of non-citizens lack health insurance, while about one-third of the foreign born (34.9%) and unemployed (33%) lack coverage. Also relatively high in the uninsured proportion, about one-fourth of Hispanics (26.9%) or persons who have not graduated from high school (24.7%) do not have health care coverage. Table 12.4 reveal groups with elevated levels of being uninsured.

Table 12.5 provides additional data on Medicare enrollment from the Center for Medicare and Medicaid Services (CMS) for 2010 and 2003.

The total number of DeKalb County residents enrolled in Medicare in 2010 was 12,417, or 11.8% of the population. Data shown in Chapter 8 revealed that 15,735 persons, or 14.5%, were enrolled in Medicaid.

Table 12.5
DEKALB COUNTY
MEDICARE ENROLLMENT: 2003 AND 2010

Characteristic	2010	2003	Change	
			Number	Percent
Aged 65+				
Hospital Insurance (Part A)	10,713	9,339	+1,374	+14.7%
Supplemental Medical (Part B)	10,117	9,027	+1,090	+12.1%
Part A and/or Part B	10,754	9,363	+1,391	+14.9%

Part A and/or Part B	1,663	1,150	+513	+44.6%
TOTAL	12,417	10,513	+1,904	+18.1%

Source: Center for Medicare and Medicaid Services (CMS). Data for July 1.

Total Medicare recipients have grown 18.1% since 2003, or slightly faster than the overall population. Disabled persons enrolled in Medicare total 1,663 and have grown 44.6% since 2003, much faster than gains in elderly enrollment.

Hospitalization

DeKalb County residents are hospitalized as inpatients somewhat less frequently than the nation (Table 12.6). With a 2011 rate of 1,010.2 hospitalizations per 10,000 population, the county's rate falls below the U.S. 2009 level of 1,181.2. Local data is for residents regardless of where they were hospitalized, based on discharge abstracts from the Illinois Hospital Association's COMPdata system. The DeKalb County use is 14.5% under the nation. In 2006, the county was 9.8% below the nation with a rate of 1,075.5.

Females (1,184.8) are 42.1% more likely to have been an hospital inpatient during 2011 than males (834.0). DeKalb County hospitalization rates are below U.S. rates for age groups 15-44 and 45-64, but higher for the 0-14 and 65+ age groups.

²Rate per 10,000 population. U.S. rate is 2009.

Note: Excludes newborns.

Source: Illinois Hospital Association; National Center for Health Statistics.

Hospital Use by Admission Reason

Being a normal newborn was the leading reason that DeKalb County residents were hospital inpatients in 2011, with 875 discharges or 8.3% of all inpatients (Table 12.7).

The most frequent non-birth related diagnosis in 2011 was psychoses, a diagnosis which includes schizophrenic disorders, mood disorders and depressive psychosis. The 540 cases during 2011 was similar to DRG 430 psychoses in 2006 with 528 cases, although the classification system has been revised and expanded in the interim. The DeKalb hospitalization rate for psychoses was 22.8% below the state.

Of the top ten DRGs, four are related to delivery including normal newborn (1), vaginal delivery uncomplicated (2) and Cesareans, both uncomplicated (5) and complicated (9). In addition to psychoses (3), other leading hospitalization reasons were major joint replacement or reattachment of a lower extremity (4), esophagitis, gastroenteritis or other uncomplicated digestive disorders (6), pneumonia (7), cellulitis (8) and kidney/ urinary tract infection (10). Major joint replacement of a lower extremity are primarily hip and knee replacements.

Major joint replacement of lower extremity rose from 284 five years earlier to 353 in 2011, moving from sixth to fourth among DRGs. Changes are difficult to track precisely because of coding changes.

Source: Illinois Hospital Association, COMPdata

Of the 25 leading 2011 DeKalb County hospitalization reasons, 15 were lower for discharges per 10,000 population than for the state, eight were higher and two were the same. Table 12.8 lists the top five higher and lower local DRGs as compared to Illinois rates.

Table 12.8
TOP FIVE HIGHER AND LOWER DEKALB COUNTY DRGs
AS COMPARED TO STATE RATES

HIGHER			LOWER		
DRG	Name ¹	Percent Above IL	DRG	Name ¹	Percent Below IL
310	Cardiac Arrythmia	+36.5%	897	Sub Abuse	-69.5%
766	Cesarean-uncomp.	+28.6%	871	Septicemia	-51.4%
194	Pneumonia	+20.0%	794	Neonate w/prob	-42.7%
470	Joint Repl Lower	+15.0%	774	Vag Del Compl.	-23.8%
191	COPD	+11.6%	292	Heart Failure	-23.7%

¹Some names are abbreviated.

The leading DRGs which occur at higher rates than Illinois include cardiac arrhythmia, Cesarean-uncomplicated, pneumonia, joint replacement-lower and COPD. Much lower than the state were 2011 hospitalizations for substance abuse, septicemia, neonates with problems, vaginal delivery-complicated, and heart failure.

Table 12.9 displays the 25 leading DRGs with additional columns showing patient days, average length of stay, total 2011 charges and average charge for the DRG.

When patient days are viewed, psychoses becomes the leading hospital reason by a wide margin, generating 4,209 patient days with an average length of stay of 7.2 days. On an average day, 11.5 DeKalb County residents are hospitalized in community and specialty hospitals for psychoses. State facilities are not reflected in the COMPdata system.

In terms of charges, the clear leader is lower joint replacements, which generate charges of \$20.6 million. Actual payments after discounts may be considerably less. Charges are also substantial for psychoses (\$8 million) and uncomplicated vaginal delivery (\$7.3 million). Above five million in total charges are recorded for Cesarean uncomplicated, digestive disorders, pneumonia, septicemia, and PCTA with stent.

The longest length of stay, aside from psychoses, is septicemia at 7.0 days.

By far, the most expensive diagnoses are PCTA with stent (\$67,496), lower joint (\$58,774) and septicemia (\$56,907).

Hospitalization by Gender and Age

Table 12.10 shows the DRGs with 50 or more discharges for each gender during 2011. Three uncomplicated delivery and birth reasons (vaginal delivery, normal newborn, Cesarean) lead the hospitalization reasons for females, while normal newborn is first for males.

Psychoses discharges in 2011 were relatively similar by gender, 278 women and 262 men, but women were more likely to experience major lower joint procedures, 218 compared to 135 for men. Women were also more likely to have digestive admissions, 183, with 106 for men.

Women also experience hospitalization at higher levels than males for the following: kidney/UTI, cellulitis, and metabolic plus uterine non-malignancy.

Variations in 2011 hospitalization reasons are shown in Table 2.11 for major age groups. For children under the age of 5, non-birth activity tended to be respiratory related, including pneumonia, bronchitis and asthma, respiratory distress, otitis media and URI. Prematurity generates extremely expensive cases, often over \$100,000 in charges for each premature infant.

Behavioral reasons dominate hospital activity for persons aged 5-14 with psychoses easily first, followed by personality disorders/impulse control.

Psychoses continues to lead non-birth hospitalization reasons in the 15-44 age group, though birth related reasons hold four of the top five spots, followed by digestive disorders.

Major lower joint procedures sit on top for both those aged 45-64 and 65-74. Psychoses places second in the 45-64 age group. Digestive disorders are second in the 65-74 age group and third in 45-64. For persons aged 45-64, cellulitis follows as #4, then substance abuse at #5, and uterine non-malignancy at #6. The next four reasons are all cardiovascular, including PCTA, cardiac arrhythmia, circulatory except AMI, and chest pain.

Pneumonia is the third most common 65-74 hospitalization reason following lower joint procedures and digestive disorders. COPD of various forms appear in three of the top ten spots, along with cardiac arrhythmia, cellulitis and metabolic disorders.

In the oldest age group analyzed - 75+ - pneumonia leads, followed by lower joint procedures, digestive disorders, heart failure and shock, and syncope.

Notable high charges among age groups are the following:

0-4	Neonate immature respiratory distress	\$116,848
15-44	Spinal fusion	\$113,958
45-64	Spinal fusion	\$128,940
75+	Ventilator support	\$123,293
75+	Major bowel procedure	\$115,792

Preventable Hospitalizations

The Illinois Public Health Community Map has been developed by the Illinois Department of Public Health using data from several sources. One category analyzes preventable hospitalizations by resident county based on 2009 data. Preventable hospitalizations may be avoided through the use of primary care.

As shown in Table 12.12, of the thirteen measures, DeKalb County does better than the state on eight measures at preventing hospitalizations. Three of these measures in which the county does well relate to diabetes, including uncontrolled diabetes (-42.2%), short-term diabetes complications (-35.9%) and long-term diabetes complications (-27.6%). Also at lower levels for DeKalb County as compared to the state were adult asthma (-43.2%), perforated appendix (-31.1%), dehydration (-30.3%), urinary tract infections (-10.8%) and lower extremity amputations (-9.9%).

Table 12.12
DEKALB COUNTY AND ILLINOIS
PREVENTABLE ADMISSIONS PER 100,000 POPULATION: 2009

Admission Reason	DeKalb County	Illinois	DeKalb/Illinois Difference
Adult Asthma	15.8	27.8	-43.2%
Angina	26.7	17.8	+50.0%
Bacterial Infection	362.5	311.4	+16.4%
COPD	267.7	223.3	+19.9%
Congenital Heart Failure	408.1	380.1	+7.4%
Dehydration	74.7	107.1	-30.3%
Diabetes Complications-Long-Term	83.5	115.3	-27.6%
Diabetes Complications-Short-Term	34.8	54.3	-35.9%
Hypertension	86.3	67.2	+28.4%
Lower Extremity Amputation	28.2	31.3	-9.9%
Perforated Appendix	19.9	28.9	-31.1%
Uncontrolled Diabetes	15.8	27.8	-43.2%
Urinary Tract Infection	169.7	190.2	-10.8%

Source: Illinois Public Health Community Map.

Five conditions are more common than the state as a whole. These may be medical conditions which could use greater patient education and/or health system attention.

The greatest overage appeared for angina (+50%), followed by hypertension (+28.4%). Other admissions at higher than state levels were COPD (+19.9%), bacterial infection (+16.4%), and congestive heart failure (+7.4%). Three of the five conditions in this group are cardiovascular while two are respiratory.

Emergency Department Visits

According to 2011 COMPdata, residents of DeKalb County made 31,467 visits to hospital emergency departments, whether at local hospitals or those outside the county. The rate is 300.4 per 1,000 population or three visits for every hundred persons. Individuals may have more than one visit in a year.

ED use is greatest for children aged 0-4, 681.9 visits for every one thousand children in the age group. Rates are fairly similar across the other age groups, led by 65+ (311.6) and 15-44 (305.5) as shown below in Table 12.13.

Table 12.13
DEKALB COUNTY RESIDENTS
EMERGENCY DEPARTMENT VISITS BY AGE GROUP: 2011

Age	DeKalb County	
	Number	Rate ¹
Total	31,467	300.4
Age Group		
0 - 4 Years	4,328	681.9
5 - 14 Years	3,925	305.5
15 - 44 Years	14,844	283.9
45 - 64 Years	5,087	223.4
65+ Years	3,283	311.6

¹Rate per 1,000 population. Computed using 2011 Census Bureau population estimates.

Source: Illinois Hospital Association.

Table 12.14 indicates that upper respiratory conditions account for the three most common ED 2011 visit reasons - otitis media, acute pharyngitis, and acute URI. Combined with other respiratory conditions in the top 25, the number of cases for 2011 was 3,789, or more than ten a day. Other conditions in the top ten include headache, gastroenteritis, urinary tract infections, chest pain, bronchitis, and abdominal pain.

In terms of cost among the leading reasons, chest pain (about \$9,000 charge per visit) is most costly followed by syncope (\$7,400) and abdominal pain (\$5,300).

Table 12.15 displays the leading visit reasons by age group. For children under age five, upper respiratory reasons dominate, led by otitis media with 437 cases. For children aged 5-14, the same pattern holds, although acute pharyngitis is the leader.

Among persons aged 15-44, headache places first, followed by abdominal pain, urinary tract infection (UTI), pregnancy complications and gastroenteritis.

Chest pain takes the top two spots among those 45-64, then headache. Among persons aged 65-74, the two leading ED visit reasons are chest pain, followed by dizziness. For the 75+ age group, UTI is first, then syncope and malaise/fatigue.

Health Facilities

Three hospitals are located in DeKalb County. Kishwaukee (DeKalb) and Valley West (Sandwich) are community hospitals which are part of the KishHealth system. Kindred in Sycamore is not classified as a hospital, as it was in the past, but is a long-term acute care facility serving “medically complex” patients especially those who are ventilator dependent.

Kishwaukee Community Hospital is the largest with 94 beds, with nearly 6,000 admissions in 2010 which generated 20,000 patient days. Specialty services include cardiac catheterization and vascular intervention, oncology services, orthopedic surgery, hemodialysis and advanced diagnostic imagery.

Valley West is smaller with a 2010 average daily census of 8.8. In addition to basic medical and dental services, Valley West offers an ICU and obstetrics.

Medicare is the largest payor for inpatient services, covering about half of patients at each facility. Other insurance and Medicaid provide coverage for most of the remaining patients.

Key elements describing all three facilities appear in Table 12.16.

As detailed in Table 12.17, Midland Surgical Center is the only ambulatory surgical treatment center (ASTC) in DeKalb County. During 2010, the facility conducted 2,699 surgical procedures with 1,726 ophthalmology, 627 orthopedic and 269 pain management.

Eight nursing homes serve DeKalb County with four in DeKalb, two in Sandwich, and one each in Sycamore and Shabbona. Utilization for 2010 appears in Table 12.18. Genesis House of Genoa, formerly classified as a nursing home, now provides independent living. Bethesda Lutheran (Sycamore) is an ICF/DD, while Oak Crest is a retirement community with several levels of care.

On December 31, 2010 a total of 658 persons were residing in DeKalb County nursing homes, 620 in nursing care, 13 in an ICF/DD and 25 in sheltered care.

Among long-term care residents, 19% had a primary diagnosis of Alzheimer's Disease, while 16.9% were in the facility due to circulatory system disorders.

In nursing care, women predominated, outnumbering men with 441 (71.1%) female residents compared to 179 (28.9%) male. Over half (51.5%) of nursing care residents were aged 75 or older at the end of 2010..

Few residents are minority members, just 1.2% black and 1.1% Hispanic. Medicaid (46.7%) is the largest payment source, followed by private pay (39.2%) and Medicare (12.9%).

Tables 12.19 and 12.20 provide a detailed breakdown of the characteristics of nursing home residents and their primary diagnosis.

Manpower

According to the 2008-2010 American Community Survey, 5,375 DeKalb County residents are employed in health care and social assistance. Of these, 83.5% are female. Median earnings are \$25,959. Of those employed in health care and social assistance, occupations in 2008-2010 are distributed as shown in Table 12.22.

Physicians are the keystone for many health care services. Tables 12.23 and 12.24 display the number of physicians in 2004 and 2010 by specialty type with comparisons of population per physician to the nation. According to the American Medical Association (AMA), on December 31, 2010, 79 physicians provided patient care in DeKalb County, similar to 78 six years earlier. The 2010 population per physician was 1,331.1 compared to the U.S. level of 410.7.

Of the 79 patient care physicians in 2010, 11 were in family or general practice, 27 in medical specialties, 25 in surgical specialties and 13 in other specialties. Three were engaged in hospital-based practice. Physician availability relative to the population trails the U.S. in all specialty types.

As a result of the limited physician supply in DeKalb County, especially in primary care, portions of the county have been designated by the federal government as medically underserved. These areas appear below in Table 12.25. Health Professional Shortage Areas (HPSAs) are designated areas where health professionals may receive remission of federal loans or bonus reimbursements. Medically Underserved Areas (MUAs) or Populations (MUPs) may be eligible for federal support of health clinics serving persons in need.

In the past, greater occupational detail was available for DeKalb County since the Illinois Department of Employment Security created county data for health occupations. The 2004 figures have been carried forward as Table 12.26. Currently, data on occupations is available from IDES only for the three-county DeKalb-Kane-Kendall area combined. Also, in the past, tabulations were available for licensed professions from what was the Illinois Department of Professional Regulation. These are no longer produced.

Chapter 13 CRIME AND VIOLENCE

Introduction

Violent behavior exacts a large toll on the physical and mental health of Americans. Violence claims the lives of many of the nation's young people and threatens the health and well-being of persons of all ages. According to *Healthy People 2020*, on an average day, over 40 persons die from homicide and a minimum of 18,000 persons survive interpersonal assaults. The United States ranks first among industrialized nations in violent deaths.

Crime Rate

A geographic area's crime rate (per 100,000 population) is based on the occurrence of eight Crime Index crimes, which are defined by the national Uniform Crime Reporting (UCR) program. Four of the index crimes in the UCR program are violent crimes – murder, criminal sexual assault (rape), robbery, and aggravated assault; while the other four are property crimes – burglary, larceny/theft, motor vehicle theft, and arson.

The 2,741 crimes committed in DeKalb County during 2009 yielded a rate of 2,578.0 crimes per 100,000 population, lower than Illinois' 3,299.8 (see Table 13.1). DeKalb County had lower rates than Illinois in 2009 for all offenses except sexual assault. The county's robbery rate was very low (45.1) when compared to the state (177.8), while the motor vehicle theft rate was about 75% lower than Illinois' rate. The DeKalb County aggravated assault rate was less than half that of the state.

Table 13.1 shows the crime rate in DeKalb County over the ten-year period 2000-2009, with a comparison to Illinois for 2009. The county's one-year crime rate fell by 2.8% from 2,651.1 in 2008, and is the lowest level recorded in at least 20 years. During the ten-year period from 2000-2009, the overall crime rate dropped by 26%. Notable were the declines from 2000 to 2009 of aggravated assault (-33.1%) and motor vehicle theft (-51.1%).

Community Crime Rates

The City of DeKalb's 2009 crime rate of 3,573.8 was highest, by far, among DeKalb County communities, and was 6.7% higher than 2008's rate of 3,350.9 (Table 13.2). DeKalb was followed by the DeKalb County portion of Somonauk (2,093.9) and Sycamore (1,736.5). The DeKalb County Sheriff's Department recorded a 2009 crime rate of just 1,578.5, falling by 17.4% from 2008's rate of 1,912.0. The county's lowest 2009 crime rate was recorded in Malta (423.0).

Along with the City of DeKalb, although still very low, Cortland (+26.6%) experienced a one-year increase in crime from 2008 to 2009, rising from just 891.3 in 2008 to 2009's rate of 1,128.7. The DeKalb County portion of Sandwich also experienced an increase in crime, going from 1,352.9 in 2008 to 1,479.2 (+9.2%). The largest one-year decline, although based on small numbers, occurred in Waterman, where the crime rate fell by 75.6% from 1,875.0 in 2008 to just 458.4 in 2009.

As Table 13.3 details, Northern Illinois University recorded 209 crimes during 2009, dropping 1.9% from 213 crimes in 2008. Three-fourths of these crimes were thefts.

City of DeKalb Arrests by Age and Gender

During 2011, the DeKalb Police Department arrested 2,872 persons, 2,412 adults and 460 juveniles. Of the adults arrested, 70.9% were male with 29.1% female. Males (62.1%) also dominated juvenile arrests, although at a lower proportion than for adults. Table 13.4 arrays arrests by age in 2011 for both adult and juvenile arrests. For adults, the peak age of arrest is 20, accounting for 15.5% of all adult arrests. Few adults over the age of 40 are arrested. Among juveniles, almost three in ten (29.1%) of those arrested are 16 years of age, followed by 17 at 24.6%.

Drug Arrests

Drug-related arrests have fluctuated in DeKalb County over the past decade. In 2009, the county recorded 571 drug arrests, for a rate of 537.1 arrests per 100,000 population. The number of drug arrests rose from 525 in 2008, and has shown a slight increase (+1.2%) since 2000. Table 13.5 contains the number and rate of drug offense arrests from 2000-2009 for DeKalb County. Generally, about 90% of drug arrests are for cannabis or drug paraphernalia.

When examining the drug arrest rate, the rate of 537.1 arrests per 100,000 DeKalb County population was well below the Illinois rate of 742.7. However, the 2009 DeKalb County arrest rate for drug paraphernalia (193.8) is 77% higher than the state rate of 109.6.

Domestic Violence

Domestic violence, especially intimate partner abuse, crosses all racial, age, religious, and socioeconomic lines. By the most conservative national estimate (BJS *Special Report: Violence Against Women*), each year more than one million women suffer nonfatal violence from an intimate. Domestic assault is statistically consistent across all racial and ethnic boundaries, and victims may experience domestic violence at any age. The Centers for Disease Control estimate the annual costs of partner violence nationally to be in excess of \$6.2 billion, of which \$4.1 billion are directly related to medical and mental health services.

Table 13.6 shows the number of domestic-related reports from the county's three largest law enforcement agencies: DeKalb Police Department, Sycamore Police Department, and the DeKalb County Sheriff's Department. In 2011, these three agencies responded to 1,488 domestic related reports, with DeKalb Police responding to the largest number of calls - 901.

Safe Passage, DeKalb County's domestic violence agency, saw 587 clients during FY2011. Of these, 484 (82.5%) were females, with the vast majority of male clients being children. Overall, 73.1% of the program's clients were adults aged 16 and older. By race, 60.1% were white, with 16.9% black, 14.1% Hispanic and 3.1% bi-racial or another race. Table 13.7 details characteristics of FY2011 clients for the program.

Over eight in ten of the program's adult clients were either married (40.2%) or single (42.4%), while 11.1% were divorced. Almost half (47.5%) of the adult clients were employed; however 21.1% reported no income.

DeKalb County Jail Population

During 2009, the average daily population (ADP) at the DeKalb County jail was 117 persons, down slightly from 124 in 2008, for a rate of 109.4 per 100,000 population. As Table 13.8 indicates, this average number was almost double the daily jail population in 1995, although population growth may be a factor in the increase in jail census. Historically, the DeKalb County jail ADP generally rose until 2009.

Elder Abuse

As Table 13.9 illustrates, elder abuse reports in DeKalb County have risen dramatically since initiation of the Illinois Elder Abuse and Neglect Program of 1991. DeKalb County recorded 100 reports of elder abuse during FY2011, for a rate of 7.5 per 1,000 persons aged 60 and older, the most reports since 1993. During 1993, just 12 elder abuse reports were received. However, better reporting procedures could account for part of the increase. The designated elder abuse reporting agency for DeKalb County is Elder Care Services of DeKalb County.

Child Abuse

During FY2010, reports of child abuse in DeKalb County numbered 696, a rate of 29.6 per 1,000 children aged 0-17, exactly the same as the Illinois rate, and the lowest county rate since 2004. Reports of abuse are not always found to be deserving of investigation, and many are not found to be indicated when investigated. Indicated means that sufficient credible evidence has been found to support an abuse/neglect claim. During FY2010, of the reported DeKalb County cases, 169 (24.2% of reported) were indicated, for a rate of 7.2, lower than the state indicated rate of 8.3.

Historically, the rate of reported child abuse in DeKalb County has fluctuated a bit since 1990. The highest child abuse report rate was in 1994 (44.2), with the lowest occurring in 2004 (27.1). Correspondingly, indicated cases of child abuse fluctuated widely, with a low of 6.0 in 2007 and a high rate of 22.2 in 1991. Table 13.10 reveals child abuse data since 1990.
