

Well/Septic Evaluation

The DeKalb County Health Department is evaluating well and septic systems of all properties on a lot by lot basis in Fairdale. The Health Department is verifying what type of septic system is in place and looking at setback distances for your own lot and the neighboring lots.

Steps to Take:

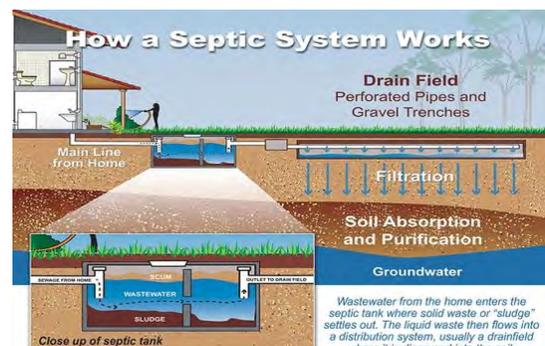

- Contact the Health Department to evaluate your property

If Rebuilding

- Tell the Health Department the number of bedrooms for the home
- Contact a Septic or Well contractor to design a system for your lot (contractor list attached)
- Contact a Soil Classifier to do soil bores on your property. This will determine the soil loading rate for the septic system (list attached)
- Submit the septic application, soil bores, and scale drawing to the Health Department
- Health Department will approve the application if Health codes are met and a permit to construct the well/septic system will be issued (permit fee waived)

The size of the septic system is determined by the number of bedrooms in a home and the soil loading rate (determined by soil classifier). The main setbacks for well/septic systems are: water well to septic tank 50', water well to septic field 75' which also includes neighboring well/septic systems. The Health Department reviews septic and well applications submitted by a contractor and verifies that all Health codes are being met. The Health Department reviews septic system plans designed by a septic contractor.

Please call Vincent Leonforte at 815-748-2430 to set up an appointment to have your lot evaluated by the Health Department if you have not already done so.

SEPTIC INSTALLERS

Todd Benesh	Waste Water Mgmt. of N IL	815-732-7612
