

FPL Energy Illinois Wind, LLC (“FPLE Illinois Wind”)
Petition MI-09-01
Exhibit P
Submitted 04/24/09
Supplemental Information Regarding Drainage and Stormwater

At the public hearing March 21/22 the applicant was asked to specify how project construction activities would protect drain tile systems and manage stormwater runoff.

FPLE Illinois Wind agrees to repair or replace any drain tile or above ground drainage systems damaged during construction to their pre-construction condition.

Underground electrical and communications cabling will be installed by open trench method rather than direct bury method. Project construction management will employ third-party drain tile contractors to assist in avoiding drain tile damage and ensuring proper repair of any drain tile or drain system impaired by construction.

In addition, FPLE Illinois Wind will obtain and follow the requirements and recommendations of applicable local, state and federal stormwater management policies and regulations.
